Local Government Areas of Bega Valley and Eurobodalla Shire Councils

Bush Fire Coordinating Committee – Policy No 01/2023

Approval

In accordance with the *Rural Fires Act 1997*, this Bush Fire Risk Management Plan has been prepared by the Far South Coast Bush Fire Management Committee and has been endorsed at the BFMC meeting on **<DATE>** for submission to the Bush Fire Coordinating Committee.

Chapter 1

Introduction

1.1 Acknowledgement to Country

The Far South Coast Bush Fire Management Committee (BFMC) acknowledges and pays respect to the Traditional Owners of the lands on which we work, and the lands we travel through. We also acknowledge our Elders – past, present and emerging.

1.2 Introduction

A Bush Fire Risk Management Plan (BFRMP) provides information on the bush fire risks within your community. It also outlines how land managers along with fire authorities are going to effectively manage those risks through implementing various treatment strategies.

The development of a BFRMP is a legal requirement under section 52 of the *Rural Fires Act 1997* (NSW) (the Act). The BFRMP, including the accompanying appendices and spatial data, is prepared by Far South Coast BFMC and is approved by the Bush Fire Coordinating Committee (BFCC).

A BFRMP is a strategic document that identifies community assets and values that may be at risk from bush fire and identifies coordinated multi-agency objectives and associated treatment strategies to reduce the risk over a five-year period. Treatment strategies may include such actions as hazard reduction burning, mechanical clearing, targeted community engagement programs and ignition prevention activities. The treatment strategies are implemented by the member agencies / organisation of the BFMC and are monitored and reported on an ongoing basis.

This document (including its appendices) and the accompanying maps form the BFRMP for the Far South Coast BFMC area. It covers both public and private land and is to be reviewed and monitored annually.

This BFRMP is applied in conjunction with the BFMC's Fire Access and Fire Trail (FAFT) Plan and Operations Coordination Plan to provide a comprehensive approach to risk mitigation and operational preparedness.

1.3 Aim and objectives

The aim of this BFRMP is to reduce the risk of adverse impacts of bush fires on life, property, infrastructure and environmental, economic, cultural, agricultural and community assets.

The objectives of this BFRMP are to:

- Objective 1:** Reduce the number of human-induced bush fire ignitions and their potential to cause damage to life, property, infrastructure and environmental, economic, cultural, agricultural and community assets.
- Objective 2:** Manage fuel to reduce the rate of spread, intensity and impact of bush fires on life and assets while minimising damage to environmental and cultural values.
- Objective 3:** Increase the community's resilience to bush fires by improving its preparedness, response and recovery.
- Objective 4:** Provide advice and strategies to plan, prepare and implement activities to effectively contain fires with the potential to cause damage to life, property, infrastructure and environmental, economic, cultural, agricultural and community assets.

1.4 The Planning Process

The Australia/New Zealand Standard AS/NZS 31000: 2018 Risk Management was used to guide the bush fire risk assessment process. This is outlined in Figure 1 below.

Figure 1: Overview of the risk assessment process

Chapter 2

Risk Assessment

2.1 Assets

An asset is something that is valued by the community. There are four main categories of assets considered in the BFRMP, each with subcategories.

2.1.1 Human settlement

- Residential areas including urban-bushland interface areas and rural properties; and
- Special Fire Protection areas including schools, hospitals, nursing homes, and tourist facilities.

2.1.2 Economic

- Agricultural - includes crops, bulk grain storage, grazing, horticulture, intensive animal production, livestock, fencing and major machinery sheds;
- Commercial - includes commercial services, Defence facilities, research facilities and ports and water transport;
- Electrical - including transmission lines, substations and electricity generation plants;
- Forestry assets – native forests, hardwood and softwood plantations;
- Industrial - includes general purpose factories, food processing factories, major industrial complexes, abattoirs, oil refineries and sawmills;
- Infrastructure – airports, communication towers, roads, railways, waste treatment plants, water treatment plants;
- Mining - combustible, non-combustible and underground;
- Recreational – community recreation facilities and major sporting and recreation complexes; and
- Water catchments.

2.1.3 Environmental

- Threatened Flora and Fauna – includes iconic species such as koalas and the Wollemi pine, threatened species, threatened ecological communities (TECs), and threatened populations at risk of extinction in NSW;
- Fire sensitive vegetation communities – includes regulated wetlands, RAMSAR wetlands and rainforest vegetation communities;

- Land covered by statutory conservation and biodiversity agreements;
- World Heritage and national and state heritage listed areas;
- Land with geological significance – includes land with high erosion potential, or geotechnical risk, karst landscapes and sand dunes;
- Environmentally significant land identified by an Environmental Planning Instrument - including Local Environment Plans (LEPs) and State Environmental Planning Polices (SEPPs); and
- Other locally important assets – including vegetation identified as bush fire refugia, bush regeneration areas and Assets of Intergenerational Significance (AIS).

Note: not all of these assets have quantitative risk assessment methodologies.

2.1.4 Cultural

- Aboriginal heritage – including items recorded in the Aboriginal Heritage Information Management System and predictive site locations from the Aboriginal Sites Decision Support Tool (ASDST);
- Non-Indigenous cultural heritage – items and places from the State Heritage Inventory, Section 170 Heritage and Conservation Register and the Historic Heritage Information Management System.

Assets across all four categories have been identified using geographic information system (GIS) data including land use classifications and cadastre (Lot boundaries), as well as local knowledge.

2.2 Neighbourhood Safer Places

A Neighbourhood Safer Place (NSP) is defined by section 62C of the *Rural Fires Act 1997* as “land or a building designated as a neighbourhood safer place”. NSPs provide a place of last resort for people during a bush fire. All designated NSP locations for NSW are available at www.rfs.nsw.gov.au.

The Far South Coast BFMC considered the number and location of Neighbourhood Safer Places (NSPs) within the BFMC area. All NSPs in Far South Coast BFMC area require ongoing treatment by the applicable land owner to ensure that the asset remains viable as a place of last resort for people during a bush fire. Therefore, all NSPs within the BFMC area are required to be treated and have been included in the Fuel Management Register.

2.3 Risk Identification and Analysis

This BFRMP is underpinned by a risk quantification methodology based on fire behaviour modelling (Phoenix RapidFire). The fire simulation process applies an ignition model, local historical weather and historical fire information to determine where fires are most likely to occur in the landscape. A Bayesian Decision Network model is used to quantify the bush fire risk to each asset in the landscape based on relevant vulnerability criteria.

Bush fire risks may also be identified during the process from qualitative assessment methodologies. For example where expert local knowledge identifies a significant area of concern, challenges in firefighting or locally significant values.

The risk maps for each asset category are provided in Appendix 3.

For a detailed description of the methodology used for assessing bush fire risk, please see [BFCC Policy 01/2023 - Bush Fire Risk Management and supporting documents](#), available on the NSW RFS website.

DRAFT

Chapter 3

Treating Risk

3.1 Treatments

The purpose of risk treatment is to reduce the likelihood and/or harmful consequences of bush fire to the community and environment, through a process of selecting and implementing risk treatment options that modify the characteristics of the hazard, the community or the environment. There are three types of treatments considered in the BFRMP:

1. BFMC Wide Treatments;
2. Focus Area Treatments; and
3. Fuel Management Treatments.

BFMC members and land managers routinely implement risk treatment strategies in accordance with legislative requirements, policy and asset management. For example, vegetation management, restrictions on development in bush fire prone areas, bush fire education and fire suppression activities. We refer to these as BFMC Wide Treatments. These activities occur outside the BFRMP and reduce the bush fire risk to assets and communities throughout the BFMC area.

The risk assessment process applied in this BFRMP assists BFMCs in identifying strategic Fuel Management Treatments and Focus Area Treatments.

Fuel Management Treatments include hazard reduction burns and vegetation clearing. These are designed to protect life, property and the environment from intense bush fires. While they will not completely stop bush fires from starting and spreading, these treatments can help protect firefighters, assist with containment strategies and reduce the potential damage to community assets and environmental values.

Focus Areas are groups of assets in the landscape that the BFMC has identified as having significant or unacceptable risk. The BFMC has specifically identified Focus Area Treatments for these areas and they prioritise these treatments over all others.

3.1.1 BFMC Wide Treatments

BFMC wide treatments are activities which are undertaken to reduce the overall bush fire risk within the BFMC area.

The following table identifies the BFMC wide treatments applicable to the Far South Coast BFMC area.

TREATMENT	DESCRIPTION
Plan of Operations	Under Part 3 Division 4 Sections 52 and 53 of the <i>Rural Fires Act 1997</i> , BFMCs are required to prepare and submit to the BFCC a Plan of Operations and must review the Plan every two years. The Plan of Operations details the co-ordinated firefighting arrangements and fire management practices and ensures that each BFMC member is able to execute its role and specific responsibilities.
Treatments in the Fire Access and Fire Trail Plan Treatment Register	<p>Under section 52 of the Act, BFMCs must develop a Fire Access and Fire Trail (FAFT) Plan for their area and must review the FAFT Plan every five years.</p> <p>Fire trails are an important part of ensuring firefighters can access fires and safely contain them. Fire trails may also be used as fire control lines for hazard reduction burns, however this is not their primary purpose.</p> <p>In accordance with the NSW RFS Fire Trail Standards the BFMC may prepare a Treatment Register which sets out a schedule of works for the construction and maintenance of fire trails. The Standards provide that the Treatment Register is updated annually and typically forms part of a FAFT Plan.</p> <p>Treatments contained within the FAFT Plan Treatment Register (as amended from time to time) are BFMC Wide Treatments under this BFRMP.</p>
Ignition Prevention Plan	The BFMC will develop an Ignition Prevention Plan (IPP). The purpose of the IPP is to provide firefighting authorities, NSW Police and Local Authorities with localised strategies to prevent ignitions. In particular, deliberate or careless ignitions and illegal fires.
Land & Asset Management	There are organisational plans, standard policies, Regulations and procedures for the management of assets and/or land managed by BFMC members. For example vegetation clearance around power lines, maintenance of public land, and agency-specific fire management plans.
Local Environmental Plans	Local Environmental Plans (LEPs) guide planning decisions for local government areas. They do this through zoning and development controls, which provide a framework for the way land can be used. LEPs can be used to exclude development in significant bush fire risk areas or in areas where bush fire protection measures cannot be incorporated.
Environmental Approval for all Hazard Reduction	Land management agencies will obtain environmental approval (through the Bush Fire Environmental Assessment Code, or other approval process) to undertake any activities that have the potential to impact the environment e.g. hazard reduction burning or vegetation removal. The environmental assessment process considers flora, fauna, threatened species, cultural assets, soil erosion, riparian areas, biodiversity fire regimes, weeds and air pollution (smoke).
Bush Fire Prone Land Mapping and Planning for Bush Fire Protection	Section 10.3 of the <i>Environmental Planning & Assessment Act 1979</i> requires the land subject to a BFRMP to be mapped in accordance with Guide for Bush Fire Prone Land Mapping. Bush Fire Prone Land Maps are used as a trigger mechanism to ensure that new development is approved in accordance with Planning for Bush Fire Protection (PBP). PBP sets planning specifications which aim to increase the likelihood of structures surviving a bush fire, and in combination with Australian Standard 3959 Building in Bush Fire Prone Areas which specifies building standards. All new development on Bush Fire Prone Land will be assessed in accordance with PBP.
Hazard complaints	It is the duty of land owners to prevent the occurrence of bush fires on, and to minimise the danger of the spread of bush fires on or from, their land.

Under section 66 of the *Rural Fires Act 1997*, a Bush Fire Hazard Reduction Notice can be issued, directing a hazard be treated. This Notice can be issued to private and public landowners. If the Bush Fire Hazard Reduction Notice is not complied with, the NSW RFS will treat the hazard, and may pursue the cost from the landowner.

Under Section 73 and Section 74E of the Act, the NSW RFS Commissioner may direct hazard reduction works to be undertaken.

Community engagement	This includes state-wide public awareness initiatives as well as local community interactions between fire agencies, land managers and local communities.
BFMC Bush Fire Danger Period	<p>The <i>Rural Fires Act 1997</i> sets the statutory Bush Fire Danger Period.</p> <p>A Fire Permit is required for burning activities during the Bush Fire Danger Period in Rural Fire districts and at all times in Fire and Rescue (FRNSW) districts around the state.</p> <p>Fire Permits help ensure fire is used safely during the Bush Fire Danger Period. A permit imposes conditions on the way a fire is lit and maintained and can only be issued by authorised Permit Issuing Officers.</p> <p>The permit provides landholders who intend to burn, with the conditions they are to adhere with to ensure adequate and appropriate measures are in place, and that fires remain under control.</p>
Firefighting response	All firefighting authorities in NSW have legislation, regulations, policies and procedures for responding to bush fire events within their area of jurisdiction.
Prosecution of arsonists / offenders	<p>Under the <i>Rural Fires Act 1997</i> persons may be prosecuted for a range of offences. These offences include:</p> <ul style="list-style-type: none"> • deliberately setting fire to the land of another person without consent; • lighting a fire without notifying the relevant authority; • breaching the conditions on a fire permit; • lighting a fire during a Total Fire Ban; • allowing fire to escape their property; or • other breaches of the Act.

Table 1: BFMC Wide Treatments

3.1.2 Fuel Management Treatments

Hazard reduction is an important component of managing bush fire risk. Hazard reduction involves removing or reducing the fuel (vegetation) in order to modify the potential fire behaviour, to reduce extreme bush fire behaviour and associated impact to firefighters and to community assets and values, to assist in fire suppression and to enable appropriate fire regimes to be implemented.

The BFRMP Fuel Management Register is a list of hazard reduction activities that the Far South Coast BFMC has identified as strategic treatments in the BFRMP. The fuel management treatments include prescribed burns, vegetation removal in BFMC-managed asset protection zones and the development or maintenance of fire breaks.

All hazard reduction activities listed in the Fuel Management Register are proposed to be completed within the five-year term of BFRMP, however, those activities that are linked to a Focus Area will be treated as a priority. The occurrence of bush fires will necessitate annual revision and reprioritisation of the treatment schedules.

See Appendix 2 for the Far South Coast BFMC Fuel Management Register.

3.1.3 Focus Area Treatments

The management of bush fire risks involves a coordinated approach from fire authorities, landowners, land managers, planning authorities, local councils and the community. Even with the combined resources of these stakeholders, it is still not possible or practical to actively treat all bush fire risks across the landscape. It is therefore important for communities and BFMCs to determine what areas will form the focus for the application of specific treatment strategies in this BFRMP.

Focus Areas were determined through an analysis of the quantitative risk assessment data, but also consider factors such as the social vulnerability of the community, access and egress and local significance.

There are 12 Focus Areas within the Far South Coast BFRMP. These are:

- Guerilla Bay
- Dalmeny / Kianga
- Central Tilba / Tilba Tilba
- Bermagui
- Tathra / Kalaru
- Merimbula / Tura Beach
- Pambula / Pambula Beach
- Eden
- Nungatta Feral Predator Free Area
- Mt Imlay
- Biamanga and Gulaga Mountains
- African Lovegrass

These are areas that have been specifically identified as having an unacceptable risk and require additional, targeted treatment strategies within the five-year BFRMP.

There are four key objectives available to manage the bush fire risk to Focus Areas and each objective has a number of associated treatment strategies (Table 2). The BFMC has identified the most appropriate objectives and treatment strategies for each Focus Area. The Focus Area treatment strategies selected by the BFMC will be addressed annually as part of the BFMC Annual Works Program.

KEY OBJECTIVE	FOCUS AREA TREATMENT STRATEGY
Fuel Management Reduction or modification of bush fire fuel with the intent of slowing the spread of bush fire and aiding firefighting operations.	Asset Protection Zone
	Ignition Management Zone
	Strategic Fire Advantage Zone
	Land Management Zone
	Fire Break; Linear
	Fire Break; Transport Corridor
	Grazing Program
Ignition Prevention Prevention or reduction of bush fire ignitions (arson & accidental).	Community Engagement; Risk Awareness
	Fire Break; Linear
	Fire Break; Transport Corridor
	Access Restriction; addressed in BFMC Ignition Prevention Plan
	Patrol; addressed in BFMC Ignition Prevention Plan
Community Preparedness Measures to enhance community preparedness for bush fire in order to reduce risk to life and assets.	Community Engagement; Risk Awareness
	Community Engagement; Planning
	Community Engagement; Preparation
	Community Engagement; Community Resilience
	Community Engagement; Community Response
Response Area specific response requirements in addition to standard procedures.	Operational Readiness Arrangements; addressed in BFMC Plan of Operations
	Neighbourhood Safer Place; addressed in BFMC Plan of Operations
	Pre-Incident Plan; addressed in BFMC Plan of Operations
	Fire Access or Fire Trail; addressed in BFMC FAFT Plan

Table 2: Key objectives for treatment strategies.

For more information on Treatment Strategies see Annexure B of [BFCC Policy 01/2023 - Bush Fire Risk Management](#) See Appendix 1 for the Far South Coast Focus Area descriptions, Key Objectives and Treatment Strategies.

3.2 Bush Fire Management Zones

Bush Fire Management Zones identified within the Far South Coast BFMC area have been mapped as part of the Fuel Management Register. These zones identify the fire management intent for a specific area. The five categories of Bush Fire Management Zones are:

- Asset Protection Zone (APZ);
- Strategic Fire Advantage Zone (SFAZ);
- Ignition Management Zone (IMZ)
- Land Management Zone (LMZ); and
- Fire Exclusion Zone (FEZ).

See Annexure C of [BFCC Policy 01/2023 - Bush Fire Risk Management](#) for further information on Bush Fire Management Zones including a description of the zones and their purposes.

3.3 Relationship with other Plans

Under section 52 of the *Rural Fires Act 1997*, each BFMC must prepare and submit to the Bush Fire Coordinating Committee a draft of each of the following:

- A bush fire management plan (defined to be both a BFRMP and a fire access and fire treatment plan (FAFT Plan)); and
- A Plan of Operations.

These BFMC planning documents should complement each other, however, a FAFT Plan prevails over the BFRMP to the extent of any inconsistency in accordance with section 59A(4) of the Act.

Treatments contained within the FAFT Plan Treatment Register (as amended from time to time) are BFMC Wide Treatments under this BFRMP.

Additionally, an Ignition Prevention Plan will be prepared for the BFMC. Other plans such as Community Protection Plans, agency specific Fire Management Strategies, or private property fire plans may be prepared, however as this BFRMP has been prepared in accordance with the Act, all other plans are subordinate to it.

Chapter 4

Communication and Consultation

4.1 Communication and Consultation

Community participation is an integral part of risk management. The BFMC undertook consultation with the community during the development phase of the BFRMP as outlined in Appendix 4. The Communication Strategy involved developing and implementing a process to address the needs, issues and concerns of stakeholders within the BFMC area in regards to the BFRMP. This involved member agencies engaging with their stakeholders to ensure their views are represented in the BFRMP and that they understand their own responsibility in risk management.

In accordance with section 57 of the *Rural Fires Act 1997*, the draft BFRMP was placed on public exhibition to provide an opportunity for the community to have formal input, and that input has been taken into account and reflected in the BFRMP.

This plan will be available from the RFS web site and must also be available for public inspection at, and be able to be obtained free of charge from, the office of the local authority for the area to which it relates during ordinary office hours.

Chapter 5

Performance Monitoring and Review

5.1 Monitoring and Review

This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC. The Far South Coast BFMC will also review this BFRMP as necessary to account for any changes in context or risk on account of changes to the BFMC area, organisational responsibilities or legislation; changes to the bush fire risk in the area; changes to the Treatment Register; or following a major fire event.

The BFMC is required to monitor progress towards the completion of treatment works listed in the BFRMP, and the timeliness of the works. This is done through an Annual Works Program and also an Annual Report. The BFRMP may also be audited at the request of the NSW RFS Commissioner or the BFCC.

Appendices

This BFRMP is supported by a number of appendices, including:

1. Focus Areas
2. Fuel Management Register (List)
3. Maps:
 - 3.1 Residential and Special Fire Protection Purpose Risk Current
 - 3.2 Economic Risk Current
 - 3.3 Aboriginal Predicted Sites Risk Current
 - 3.4 Environmental Risk Current
 - 3.5 Historic Heritage Risk Current
 - 3.6 Focus Areas and Fuel Management Register
4. Communication Strategy

Nungatta Feral Predator Free Area
Mt Imlay
Biamanga and Gulaga Mountains
African Lovegrass

DRAFT

Focus Areas Map

1.1 Guerilla Bay

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection purpose (schools, health facilities, childcare etc), economic, environmental and cultural assets and has identified Guerilla Bay as a Focus Area.

Guerilla Bay, known for its pristine beaches and lush native vegetation is a small coastal community in the Eurobodalla Local Government Area, approximately 12 kms southeast of Batemans Bay. With a population of less than 100 people, residents and tourists to Guerilla Bay value living simply and naturally, overlooking the sea, within highly forested native bushland and surrounds.

There are a small number of permanent residents, with many living and working elsewhere. The majority of community members are over 45 years of age. There are limited access and egress options, with one road in and out.

Heathland and Wet Sclerophyll Forest vegetation types cover the area with Mogo State Forest across the highway beyond to the northwest. The last significant fire event was during the Black Summer fires in 2019/2020 when the Currowan fire came within 1km of the settlement.

Fire impact on environmental and cultural assets will be significant if fire were to occur in the area burnt within the next five years. Over 60% of vegetation was burnt at high to severe severity during the Black Summer fires. As a result, the fuel loads across the areas burnt are variable, however the risk will increase to high over the next 5 years if and as the vegetation recovers.

Bush fire is a key threatening process for many environmental assets. Guerilla Bay Focus Area protects the following environmental and cultural assets:

- Eight threatened fauna species and 2 marine/migratory fauna species
- Two Threatened Ecological Communities
- Two Saving our Species conservation strategy sites for five landscape species
- Ten known Aboriginal Sites
- One Heritage item listed under the Local Environmental Plan

A key BFMC objective in Guerilla Bay is to improve Community Preparedness. In particular, the maintenance of private property Asset Protection Zones & the preparation of Bush Fire Survival Plans. This will be achieved through the provision of resources and the implementation of programs that will help residents better understand their risk, plan and prepare for bush fire.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Guerilla Bay are listed in Table 1.

DRAFT

1.2 Dalmeny and Kianga

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection purpose (schools, health facilities, childcare etc), economic, environmental and cultural assets and has identified Dalmeny and Kianga as a Focus Area.

Dalmeny and Kianga are coastal townships, with a population of almost 3000 people swelling during the tourist seasons. North of Narooma, it is mainly residential with an average household size of two. Where houses are located on the headlands looking over the Tasman Sea with the shores of Lake Mummuga, a coastal lagoon to the north. The townships are popular areas for boating, fishing, water sports and other tourism activities with numerous public picnic spots and lookouts along headlands, beaches, and boat ramps. Although small, Dalmeny has a shopping precinct, an industrial area to its northwest, a bowling club, sporting fields, a popular campground and two retirement and aged-care facilities. The median age is 59 years and the vast majority of residents are permanent with over half no longer in the labour force.

There are two roads in and out, linking to the Princes Highway to the west of the townships.

Vegetation types vary, but mainly consist of Dry and Wet Sclerophyll Forest. Eurobodalla National Park is to the north, and Bodalla State Forest is to the west. The last significant fire event was during the Black Summer Fires in 2019/2020, impacting the National Park less than 1km north, with Bodalla State Forest unaffected.

Residential, environmental and economic risk to the area is in the highest category. Bodalla State Forest has significant economic and conservation values. The Narooma Mountain Bike Track, promoting tourism to the area is also at risk if a bush fire was to impact the area.

Bush fire is a key threatening process for many environmental assets. There is a risk that another bush fire event in this area would negatively impact:

- Thirty two threatened fauna species (including 1 Critically Endangered fauna species), and thirteen marine/migratory fauna species
- Six Threatened Ecological Communities
- One Saving our Species (SoS) conservation strategy site for four landscape species
- Two wetlands (Lake Mummuga and Kianga Lake)
- Thirty eight known Aboriginal Sites (AHIMS)
- One Heritage item listed under the Local Environmental Plan

A key BFMC objective in Dalmeny and Kianga Townships is to improve Community Preparedness. In particular, the maintenance of private property Asset Protection Zones & the preparation of Bush Fire Survival Plans. This will be achieved through the provision of resources and the implementation of programs that will help residents better understand their risk, plan and prepare for bush fire.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Dalmeny and Kianga are listed in Table 2.

	Strategic Fire Advantage Zone; prescribed burn	DK.SF

DRAFT

1.3 Central Tilba and Tilba Tilba

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection purpose (schools, health facilities, childcare etc), economic, environmental and cultural assets and has identified Central Tilba and Tilba Tilba as a Focus Area.

Central Tilba and Tilba Tilba, on the land of the Yuin People are two small historic villages on the western side of the Princes Highway, 17km south of Narooma. The town was settled during the Australian gold rushes of the nineteenth century and the entire village of Central Tilba is classified by the National Trust as the Central Tilba Conservation Area. Central Tilba is a highly popular historic tourist and shopping precinct.

Nestled beneath the shadow of Gulaga (Mother Mountain) and the Gulaga National Park to its west, on the east are rolling farmlands and dairy country out to the Princes Highway.

The last significant fire event was during the Summer of 2019/2020, which came within 4km of the townships to the west but did not impact Gulaga Mountain.

Residential and Economic Risk is currently moderate, however the risk will increase over the next 5 years if and as the vegetation recovers within the fire scar of the wildfire events of the Summer of 2019/2020.

Bush fire is a key threatening process for many environmental assets. There is a risk that another bush fire event in this area would negatively impact:

- Two threatened flora species (including one Critically Endangered species)
- One Threatened Ecological Community
- Two Saving our Species (SoS) conservation strategy sites: one site for a site-managed species, and one site for four landscape species
- Nineteen Heritage items listed under the Local Environmental Plan

The BFMC objective is to protect residential, commercial, environmental and cultural heritage values through the implementation of an integrated approach encompassing fuel management, ignition management, community preparedness and response treatments.

A key objective in Central Tilba and Tilba Tilba townships is to improve Community Preparedness. In particular, the maintenance of commercial and private property Asset Protection Zones & the preparation of Bush Fire Survival Plans. This will be achieved through the provision of resources and the implementation of programs that will help residents and tourism operators better understand their risk, plan and prepare for bush fire.

Operational response strategies will be addressed in the BFMC Plan of Operations through the development of the Central Tilba and Tilba Tilba Pre-Incident Plan.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Central Tilba and Tilba Tilba are listed in Table 3.

DRAFT

1.4 Bermagui

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection purpose (schools, health facilities, childcare etc), economic, environmental and cultural assets and has identified Bermagui as a Focus Area.

Bermagui is a large coastal township, with a population of almost 3000 residents. Bermagui lies on the shores of the southern end of Horseshoe Bay and is famous for its deep sea & game fishing and recognised for its vibrant seaside town atmosphere and breathtaking scenery. Popular amongst tourists, the population rises exponentially during holiday periods.

The port of Bermagui was first established in the 1830's for the local dairy farmers, sawmillers and fishermen. The town quickly developed into a fishing harbour.

The last significant fire event was the Coolagolite fire in September 2023 which came within 5km southwest of the township. Prior to that, the bush fire events of 2019/2020, came within 6km northwest & west of the township. Access and egress options are limited, with two roads in and out of the township.

Residential and economic risk are currently moderate, however the risk will increase over the next 5 years as the vegetation recovers within the fire scars of the bush fire events of the Summer of 2019/2020 and Coolagolite.

The Focus Area includes cultural sites sacred to the Djiringanj people. Bermagui Waterhole is part of their creation story and a traditional walking track / trading route along the coast and to Yuin ceremonial and spiritual sites. It was a source of water as they followed the track to Biamanga or Gulaga Mountain. Bermagui headland is also an important cultural site for the Yuin People, a place for sharing knowledge of the sea and water.

Bush fire is a key threatening process for many environmental assets in the area. There is a risk that another bush fire event in this area would negatively impact:

- Nineteen Threatened fauna species
- Thirteen marine/migratory fauna species, and two threatened flora species
- Nine Threatened Ecological Communities
- Six Coastal Wetlands listed under *SEPP (Resilience and Hazards) 2021*
- Eight Wetlands, including five estuarine wetlands, two coastal lagoons and lakes, and one reservoir
- One Area of Regional Koala Significance (Murrumbidgee)
- One Private Land Conservation Agreement (wildlife refuge)
- One Saving our Species (SoS) conservation strategy site for four landscape species
- one flora reserve
- Twenty nine known Aboriginal Sites (AHIMS)
- One Aboriginal Place (Bermagui Waterhole)
- Twelve Heritage items listed under the Local Environmental Plan

A key BFMC objective is to protect residential, commercial, environmental and cultural heritage values through the implementation of an integrated approach encompassing fuel management, prescribed burning, response treatments and community preparedness.

Risk Profile

Maintenance of commercial and private property Asset Protection Zones & the preparation of Bush Fire Survival Plans is a priority, achieved through the provision of resources and the implementation of programs that will help residents and tourism operators better understand their risk, plan and prepare for bush fire.

Operational response strategies will be addressed in the BFMC Plan of Operations.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Bermagui are listed in Table 4.

1.5 Tathra and Kalaru

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection purpose (schools, health facilities, childcare etc), economic, environmental and cultural assets and has identified the Tathra and Kalaru as a Focus Area.

Historically, the Tathra jetty, served local Bega Valley Farmers as a shipping outlet. Regular shipping began after the wharf was built in 1862, crucial to the district due to the absence of railway lines and poor roads. Tathra Wharf is listed on the Register of the National Estate and the NSW Heritage list.

Tathra is now a thriving coastal residential township, populated by residents, weekenders and tourists, about 18km east/southeast of Bega. The population increases exponentially in Tathra during the tourist seasons. Kalaru is a growing rural residential area to the west of Tathra, with homes on smaller acreage.

Mimosa National Park to their north, Bournda National Park to their south and Tathra Flora Nature Reserve to the north/northwest, vegetation types are both Wet and Dry Sclerophyll Forest, with Heathland along the coast and farm and agricultural land to the west.

The last significant fire event, the Reedy Swamp Fire in March 2018, impacted the township, with community suffering the loss of 79 homes.

Residential and economic risk is currently moderate, however the risk is expected to increase over the next 5 years if and as the vegetation recovers within previous fire scars.

Bush fire is a key threatening process for many environmental assets. There is a risk that another bush fire event in this area would negatively impact:

- Thirty one threatened fauna species (including one Critically Endangered fauna species), twelve marine/migratory fauna species, and three threatened flora species
- Nine Threatened Ecological Communities
- Two Coastal Wetlands listed under *SEPP (Resilience and Hazards) 2021*
- Three wetlands including two coastal lagoons and lakes (Wallagoot Lake) and one estuarine wetland (Bega River)
- One Area of Regional Koala Significance (Murrah)
- One Private Land Conservation Agreement (Wildlife Reserve)
- Two Saving our Species (SoS) conservation strategy sites: one site for a site-managed species, and one site for four landscape species
- Seventy-one known Aboriginal Sites (AHIMS)
- Eleven Heritage items listed under the Local Environmental Plan, including two conservation areas
- One State Heritage listed item (Tathra Wharf and building)

A key BFMC objective is to protect residential, commercial, environmental and cultural heritage values through the implementation of an integrated approach encompassing fuel management, prescribed burning, response treatments and community preparedness. Maintenance of commercial and private property Asset Protection Zones & the preparation of Bush Fire Survival Plans is a priority, achieved through the provision of resources and the implementation of programs that will help residents and tourism operators better understand their risk, plan and prepare for bush fire.

Operational response strategies will be addressed in the BFMC Plan of Operations.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Tathra and Kalaru are listed in Table 5.

1.6 Merimbula and Tura Beach

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection purpose (schools, health facilities, childcare etc), economic, environmental and cultural assets and has identified the Merimbula and Tura Beach as a Focus Area.

Merimbula, known as the Twin Lakes, began its existence as a private village belonging to the Twofold Bay Pastoral Association, which opened it as a port in 1855. The discovery of gold in Kiandra stimulated the economy with the development of facilities in the town to service surrounding rural areas. It was in the 1950s when it became a popular holiday resort.

Now Merimbula has a population of over 8200 residents, with a median age of 56 years. This population swells in the Summer months. Significant residential development is planned for the area. Merimbula and Tura Beach are currently at a high level of residential and economic risk.

With Bournda National Park to its north, South East National Park and Yuramine State Forest to its east and south, visitors flock to the area during the holiday season for its whale watching, pristine wilderness walks, boating, fishing, water sports, commercial and tourism facilities. Merimbula Regional Airport is east of the township and north of Pambula.

The last significant bush fire event during the Summer of 2019/2020, came within 14km west of the township. Vegetation types are both Wet and Dry Sclerophyll Forest with some farming land to the west and Heathland along the Coast.

Bush Fire is a key threatening process for many environmental assets. There is a risk that another bush fire event in this area would negatively impact:

- Forty-two threatened fauna species (including three Critically Endangered fauna species), fourteen marine/migratory fauna species, and two threatened flora species
- Eleven Threatened Ecological Communities
- One Coastal Wetland listed under *SEPP (Resilience and Hazards) 2021*
- Seven wetlands including six coastal lagoons and lakes and one reservoir
- Three Saving our Species (SoS) conservation strategy sites: two sites for site-managed species, and one site for four landscape species
- Seventy-one known Aboriginal Sites (AHIMS)
- Eight Heritage items listed under the Local Environmental Plan
- One State Heritage listed item (Courunga)

A key BFMC objective is to protect residential, commercial, environmental and cultural heritage values through the implementation of an integrated approach encompassing fuel management, prescribed burning, response treatments and community preparedness. Maintenance of commercial and private property Asset Protection Zones & the preparation of Bush Fire Survival Plans is a priority, achieved through the provision of resources and the implementation of programs that will help residents and tourism operators better understand their risk, plan and prepare for bush fire.

Operational response strategies will be addressed in the BFMC Plan of Operations.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Merimbula and Tura Beach are listed in Table 6.

1.7 Pambula and Pambula Beach

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection purpose (schools, health facilities, childcare etc), economic, environmental and cultural assets and has identified Pambula and Pambula Beach as a Focus Area.

The name Pambula is derived from its Thawa language name 'Panboola' meaning 'twin waters'.

The Imlay Brothers settled the area in the 1830s taking up land on the Pambula Flats for agriculture, which remains the dominant land use in the area to this day. The flats are now Panboola, a 77-hectare flood plain managed by Pambula Wetlands and Heritage Project with the Reserve Trust. Gold was discovered in 1889, the Pambula Goldfield is listed on the Register of the National Estate. Oaklands Homestead, one of the oldest buildings in the Bega Valley is listed on the NSW Heritage register as a rare example of an intact colonial homestead with its outbuildings and immediate garden.

Pambula township is a thriving commercial and residential area, with a Hospital and School; and Pambula Beach are at the high level of bush fire risk category.

Access and egress options are limited, with roads in and out through forested bushland. With the Pacific Ocean to the east, Pambula Beach borders Beowa National Park, a pristine wilderness area to the north, west and south. Nullica State Forest is to the southwest of the townships.

The last significant bush fire event during the summer of 2019/2020, came within 15km south/southwest of the township. Vegetation types are both Wet and Dry Sclerophyll Forest to the west and Heathland along the Coast.

Bush fire is a key threatening process for many environmental assets. There is a risk that another bush fire event in this area would negatively impact:

- Seventeen threatened fauna species and 6 marine/migratory fauna species
- Six Threatened Ecological Communities
- One Coastal Wetland listed under *SEPP (Resilience and Hazards) 2021*
- One Private Land Conservation Agreement (Voluntary Conservation Agreement)
- Three Saving our Species (SoS) conservation strategy sites: two sites for site-managed species, and one site for four landscape species
- Four known Aboriginal Sites (AHIMS)
- Thirty-eight Heritage items listed under the Local Environmental Plan

A key BFMC objective is to protect residential, commercial, environmental and cultural heritage values through the implementation of an integrated approach encompassing fuel management, prescribed burning, response treatments and community preparedness. Maintenance of commercial and private property Asset Protection Zones & the preparation of Bush Fire Survival Plans is a priority, achieved through the provision of resources and the implementation of programs that will help residents and tourism operators better understand their risk, plan and prepare for bush fire.

Operational response strategies will be addressed in the BFMC Plan of Operations.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Pambula and Pambula Beach are listed in Table 7.

1.8 Eden

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection purpose (schools, health facilities, childcare etc), economic, environmental and cultural assets and has identified the Eden as a Focus Area.

Eden, is a large township, situated in the southern-most part of the Far South Coast BFMC area. The town is 278km southeast of Canberra, located between Nullica Bay to the south and Calle Calle Bay, the northern reach of Twofold Bay. Settled post 1842, Eden was built on undulating land adjacent to the third deepest natural harbour in the southern hemisphere. The port of Eden is a valuable economic resource for the community, host to tourists on cruise ships, and the local fishing industry. Significant economic assets to the south of Eden supporting the timber industry and local community, are at high risk of bush fire.

With Nullica State Forest to its north, west and southwest, East Boyd State Forest and Beowa National Park to its south, Eden is a popular haven for retirees, holiday makers for whale watching and water sports. With a population of over 3000, and a median age of 53 years, there are areas of very high social vulnerability. These factors may make these members of the community more vulnerable to the impacts of bush fire.

The last significant bush fire event during the Black Summer fires of 2019/2020, the Border Fire, impacted economic assets in the south and burnt within 2km southwest of the township. Vegetation types are both Wet and Dry Sclerophyll Forest to the west and Heathland along the Coast.

The impact on environmental and cultural assets will be significant if fire were to re-occur in the area burnt in 2019/20 within the next five years. Over 60% of vegetation was burnt at high to severe intensity during the Black Summer fires removing much of the canopy. As a result, the fuel loads to the south in the recovering vegetation are variable, however the risk will increase to high over the next 5 years if and as the vegetation recovers.

Bush fire is a key threatening process for many environmental assets. There is a risk that another bush fire event in this area would negatively impact:

- Twenty-seven threatened fauna species (including one Critically Endangered fauna species), and fourteen marine/migratory fauna species
- Ten Threatened Ecological Communities
- Two Coastal Wetlands listed under *SEPP (Resilience and Hazards) 2021*
- Two Wetlands (Curalo Lagoon and Cocora Lagoon)
- Two Saving our Species (SoS) conservation strategy sites: one site for a site-managed species, and one site for four landscape species
- Twenty known Aboriginal Sites (AHIMS)
- Thirty-two Heritage items listed under the Local Environmental Plan

A key BFMC objective is to protect residential, commercial, environmental and cultural heritage values through the implementation of an integrated approach encompassing fuel management, prescribed burning, response treatments and community preparedness. Maintenance of commercial and private property Asset Protection Zones & the preparation of Bush Fire Survival Plans is a priority, achieved through the provision of resources and the implementation of programs that will help residents and tourism operators better understand their risk, plan and prepare for bush fire.

Operational response strategies will be addressed in the BFMC Plan of Operations.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Eden are listed in Table 8.

DRAFT

Nungatta Feral Predator Free Area

Risk Profile

The Far South Coast BFMC has assessed the risk to environmental assets and has identified Nungatta Feral Predator-free Area (FPFA) as a Focus Area in the Bush Fire Risk Management Plan.

Nungatta FPFA located in the South East Forest National Park, is one of seven sites in NSW comprising the feral predator-free network, one of the most significant threatened fauna and ecological restoration projects in NSW's history. The site is vulnerable to unplanned, high intensity fire events that would have a significant impact on local and reintroduced threatened fauna as well as the significant infrastructure associated with the site including approx. 30 km of fences and works depot. The site encompasses some 2085 hectares and is listed as an Area of Inter-generational Significance under NSW Biodiversity Act. The area is located in a highly fire-prone landscape, which has been subjected to several bush fires over the last fifty years, notably 1982/1983 and 2019/2020. This FPFA will have measurable benefit for more than thirteen threatened animal species and the re-establishment of up to twelve native mammal species currently listed as extinct in NSW.

This focus area protects habitat for the following Environmental and Cultural Assets:

- Sixteen threatened fauna species
- One threatened flora species
- Two Saving our Species priority management sites - protecting two threatened species
- Twenty one Aboriginal site records (AHIMS), including four significant trees
- One State Heritage record, Bundian Way

A key BFMC objective for the Nungatta FPFA is to implement an integrated approach encompassing fuel management, ignition management, and response treatments. The fire management strategy for the surrounding reserves will continue to be implemented, and Fire Access and Fire Trails Plan and other fire trails maintained. Local brigades will be engaged in familiarisation days to foster an appreciation of the site and through the implementation of planned burns work to reduce the risks of unplanned ignitions and appropriate response protocols.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for the Nungatta Feral Predator Free Area are listed in Table 9.

DRAFT

1.10 Mt Imlay

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to environmental assets and has identified the area around the summit of Mt Imlay (Balawan), as a Focus Area.

This Focus Area is located within Mt Imlay National Park and protects two Critically Endangered flora species, the Imlay Mallee (*Eucalyptus imlayensis*) and Connie's Guinea Flower (*Hibbertia circinate*). Both species have an extremely restricted distribution with low numbers, and low levels of reproduction.

The site is vulnerable to unplanned, high intensity fire events that would have a significant impact on the critically endangered species as high intensity fire or too frequent fire will negatively impact the seedbank for these species.

The site encompasses some 99.5 hectares and includes two Areas of Inter-generational Significance under NSW Biodiversity Act (one for each species). The area is located in a highly fire-prone landscape, which has been subjected to several bush fires over the last fifty years, notably 1972/73 and 2019/20.

This Focus Area protects habitat for the following Environmental and Cultural Assets:

- Five threatened fauna species
- Three threatened flora species
- Two Saving our Species priority management sites.

A key BFMC objective for the Mt Imlay Focus Area is to implement an integrated approach encompassing fuel management, ignition management, and response treatments. The fire management strategy for each reserve will continue to be implemented, and Fire Access and Fire Trails Plan and other fire trails maintained. Local brigades will be engaged in familiarisation days to foster an appreciation of the site and through the implementation of planned burns work to reduce the risks of unplanned ignitions and appropriate response protocols.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for the Mt Imlay Focus Area are listed in Table 10.

DRAFT

1.11 Biamanga and Gulaga Mountains

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to cultural values and has identified the area around the mountains of Biamanga (Mumbulla) and Gulaga, as a Focus Area.

This Focus Area is located within Biamanga and Gulaga National Parks and protect significant cultural values for Aboriginal communities along the South Coast. Gulaga is the spiritual mother and place of origin. Although identified as a Mountain for women, there are also areas of significance to men. Mumbulla Mountain (Biamanga) is primarily significant to men, while also having areas of importance to women. Both mountains are places for initiation ceremonies and continue to be valued as sacred places where cultural practices are undertaken and on which cultural identities are based.

These two National Parks are managed under Aboriginal Joint Management Agreements, where Aboriginal community works collaboratively with NPWS to protect, manage and conserve the natural and cultural values, these are:

- Gulaga National Park managed jointly by Wagonga and Merrimans LALCs and NPWS
- Biamanga National Park managed jointly by Bega and Merrimans LALCs and NPWS

The sites are vulnerable to unplanned, high intensity fire events that would have a significant impact on the cultural values. The Focus Area comprises of 13,587 hectares around Biamanga (Mumbulla) Mountains and 4,764 hectares around Gulaga Mountain. The area is located in a highly fire-prone landscape, which has been subjected to several bush fires over the last fifty years, notably 1980/1981 (Biamanga & Gulaga), 1986/1987 (Biamanga), 1990/1991 (Gulaga), 2002/2003 (Biamanga) 2009/2010 (Gulaga) and 2019/2020 (Biamanga).

A key BFMC objective for the Biamanga (Mumbulla) & Gulaga Mountains Focus Area is to implement an integrated approach encompassing fuel management, ignition management, and response treatments. The fire management strategy for each reserve will continue to be implemented, and Fire Access and Fire Trails plan and other fire trails maintained. Local brigades will be engaged in familiarisation days to foster an appreciation of the site through the implementation of planned burns work to reduce the risks of unplanned ignitions and appropriate response protocols.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for the Biamanga (Mumbulla) and Gulaga Mountains Focus Area are listed in Table 11.

DRAFT

1.12 African Lovegrass

Risk Profile

The Far South Coast Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection purpose (schools, health facilities, childcare etc), economic, environmental and cultural assets and has identified African Lovegrass as a Focus Area.

African Lovegrass (*Eragrostis curvula*) is an exotic perennial grass native to Southern Africa. It is present throughout New South Wales and is a major weed of grazing lands due to its invasiveness, potential for spread and fire risk.

African Lovegrass seeds are dispersed by grazing animals (on fur, wool and in gut), slashing or mowing, vehicles, fodder and soil/gravel imports, water (streams and rivers) and some distance by wind.

African Lovegrass is highly flammable and burns easily. The grass creates a fire hazard when it is frost affected or cured by significant moisture stress. Fires in African Lovegrass generate a lot of heat, are very unpredictable in behaviour and are difficult to manage.

Managing African Lovegrass requires a coordinated and strategic approach of treatments and can include a combination of burning, grazing, slashing and chemical control. Burning African Lovegrass can assist in reducing old growth biomass and fire hazard however annual burning of African Lovegrass is not recommended as it is detrimental to the existing pasture soil seedbank, the soil ecosystem, and the environment. This is supported by the listing of high frequency fire resulting in the disruption of life cycle processes in plants and animals and loss of vegetation structure and composition under Schedule 4 of the *Biodiversity Conservation Act 2016*.

African Lovegrass is also identified as a key threatening process to endangered ecological communities and flora because of its ability to dominate native plant communities and displace native plants. African Lovegrass infestations can change fire regimes within these communities which is also identified as a threat to them (Schedule 4, *Biodiversity Conservation Act 2016*).

A key BFMC objective is to increase and improve community awareness of the flammability and invasiveness of African Lovegrass. This will be achieved through the provision of resources and the implementation of programs that will help residents better understand their risk, options to reduce that risk, and how to prepare for fire if it were to occur in African Lovegrass.

The BFMC will also undertake maintenance of Asset Protection Zones adjacent to areas of African Lovegrass, and work with agencies to identify and implement appropriate control and management options of the grassy weed.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for African Love grass are listed in Table 12.

*Strategy: GP (Grazing Program); IMZ (Ignition Management Zone); LFB (Linear Firebreak); LMZ (Land Management Zone), SFAZ (Strategic Fire Advantage Zone), TCFB (Transport Corridor Fire Break). See Annex C BFCC Policy 01/2023 for further information on bush fire management zones including a description of the zones and their purposes.

The Transport Corridor Fire Breaks identified by Transport for NSW along the state road network, noted in the Fuel Management Register will be managed in line with the Transport for NSW Roadside Clearing Guidelines (defined by the back of the table drain or 4m from the edge of asphalt, or 1.2m beyond the back of the safety barrier).

Appendix 3

Maps

- 3.1 Residential and Special Fire Protection Purpose Risk Current
- 3.2 Economic Risk Current
- 3.3 Aboriginal Predicted Sites Risk Current
- 3.4 Environmental Risk Current
- 3.5 Historic Heritage Risk Current
- 3.6 Focus Areas and Fuel Management Register

Known Aboriginal sites were also assessed in the development of this BFRMP, however due to the sensitive nature of the data bush fire risk maps for these assets are not being shared for public exhibition at this time.

Appendix 4

Communication Strategy

Date	Target Audience	Method of communication	Method of notification	Key messages/ purpose	Resources required	Responsibility
March 2022	Far South Coast Bush Fire Management Committee (BFMC)	BFMC Meeting	Email	Introduction to risk planning process and data validation	BFRMP Presentation 1 BFRMP Factsheets	NSW RFS Area Command South Eastern Risk Planning Team
November 2022	Eurobodalla and Bega Valley RFS Volunteers	Workshop 1s	Email	Introduction to risk planning process and review and validation of data for processing	BFRMP Presentation 1 FSC Preliminary Risk Maps for Residential Assets, Fuel Type, Modelled Ignitions, Modelled Burn Frequency and Predicted Fuel Loads	NSW RFS Area Command South Eastern Risk Planning Team
November 2022	Far South Coast BFMC	Workshop 1	Email	Introduction to risk planning process and review and validation of data for processing	BFRMP Presentation 1 FSC Preliminary Risk Maps for Residential Assets, Fuel Type, Modelled Ignitions, Modelled Burn Frequency and Predicted Fuel Loads	NSW RFS Area Command South Eastern Risk Planning Team
April 2023	Far South Coast Community	Online and Social Media	Facebook	Community consultation via BFMC webpage on RFS website, asking what is important to people living and working in the BFMC area	BFMC Webpage with detail about the Planning process, information about the Far South Coast BFMC area and a survey "Have your Say" for feedback from Community	NSW RFS HQ Risk Planning Team

May 2023	Eurobodalla and Bega Valley RFS Volunteers	Workshop 2s	Email	Analyse risk and develop draft Focus Areas and treatment strategies	BFRMP Presentation 2. Far South Coast Current and Future Risk Maps for Residential, Special Fire Protection Purpose, Cultural Heritage, Environmental Heritage and Economic Assets	NSW RFS Area Command South Eastern Risk Planning Team and RFS Far South Coast District
May 2023 – May 2024	Far South Coast BFMC	Workshop 2s	Email	Analyse risk and develop draft Focus Areas and treatment strategies	BFRMP Presentation 2. Far South Coast Current and Future Risk Maps for Residential, Special Fire Protection Purpose, Cultural Heritage, Environmental Heritage and Economic Assets	NSW RFS Area Command South Eastern Risk Planning Team and RFS Far South Coast District
May 2024	Far South Coast Local Aboriginal Land Councils & Batemans Bay, Bega & Merrimans LALC Rangers	Risk Planning Session	Email	Risk analysis, consultation on treatment strategies	BFRMP Presentation 1 & 2. Far South Coast Current and Future Risk Maps for Residential, Special Fire Protection Purpose, Cultural Heritage, Environmental Heritage and Economic Assets	NSW RFS Area Command South Eastern Risk Planning Team and RFS Far South Coast District
June 2024	Far South Coast BFMC	Workshop 3	Email	Consider feedback, analyse risk profile and fuel management treatment effectiveness, finalise Draft Plan, Focus Areas, treatments & Fuel Management Register.	Risk Maps, Draft Bush Fire Risk Management Plan	NSW RFS Area Command South Eastern and Far South Coast BFMC
Public Exhibition	Far South Coast BFMC	In writing	Email	Draft Plan out for Exhibition	Draft Bush Fire Risk Management Plan	Far South Coast BFMC XO
Public Exhibition	Far South Coast Community	Online, Social Media, Roadshows? Community Meetings in	BFMC Social Media, Far South Coast	Draft Plan out for Exhibition for Community consultation	Draft Bush Fire Risk Management Plan	Far South Coast BFMC, HQ Risk Planning Team

		Focus Areas? Via local media contacts, Service NSW website, letterbox drops? community noticeboards?	Councils Chambers			
Proposed/TBC	Far South Coast BFMC	Workshop	Email	Plan review by the BFMC, finalised and endorsed	Community Feedback, Draft Bush Fire Risk Management Plan	NSW RFS Area Command South Eastern Risk Planning Team, RFS Far South Coast and BFMC
Proposed/ TBC	Far South Coast Community	Online BFMC webpage on NSW RFS website	Facebook,	Once the Plan is finalised and approved, the Plan is made available through the BFMC's webpage on the NSW RFS website	BFMC Webpage with detail about the Planning process, information about the Far South Coast BFMC area, and the approved Plan	NSW RFS Far South Coast RFS, NSW RFS HQ Risk Planning Team
