Bush Fire Coordinating Committee – Policy No 01/2023

Approval

In accordance with the *Rural Fires Act 1997*, this Bush Fire Risk Management Plan has been prepared by the Riverina Bush Fire Management Committee and has been endorsed at the BFMC meeting on **<DATE>** for submission to the Bush Fire Coordinating Committee.

Introduction

1.1 Acknowledgement to Country

The Riverina Bush Fire Management Committee (BFMC) acknowledges and pays respect to the Traditional Owners of the lands on which we work, and the lands we travel through. We also acknowledge our Elders – past, present and emerging.

1.2 Introduction

A Bush Fire Risk Management Plan (BFRMP) provides information on the bush fire risks within your community. It also outlines how land managers along with fire authorities are going to effectively manage those risks through implementing various treatment strategies.

The development of a BFRMP is a legal requirement under section 52 of the *Rural Fires Act 1997* (NSW) (the Act). The BFRMP, including the accompanying appendices and spatial data, is prepared by Riverina BFMC and is approved by the Bush Fire Coordinating Committee (BFCC).

A BFRMP is a strategic document that identifies community assets and values that may be at risk from bush fire and identifies coordinated multi-agency objectives and associated treatment strategies to reduce the risk over a five-year period. Treatment strategies may include such actions as hazard reduction burning, mechanical clearing, targeted community engagement programs and ignition prevention activities. The treatment strategies are implemented by the member agencies / organisation of the BFMC and are monitored and reported on an ongoing basis.

This document (including its appendices) and the accompanying maps form the BFRMP for the Riverina BFMC area. It covers both public and private land and is to be reviewed and monitored annually.

This BFRMP is applied in conjunction with the BFMC's Fire Access and Fire Trail (FAFT) Plan and Operations Coordination Plan to provide a comprehensive approach to risk mitigation and operational preparedness.

1.3 Aim and objectives

The aim of this BFRMP is to reduce the risk of adverse impacts of bush fires on life, property, infrastructure and environmental, economic, cultural, agricultural and community assets.

The objectives of this BFRMP are to:

- Objective 1:** Reduce the number of human-induced bush fire ignitions and their potential to cause damage to life, property, infrastructure and environmental, economic, cultural, agricultural and community assets.
- Objective 2:** Manage fuel to reduce the rate of spread, intensity and impact of bush fires on life and assets while minimising damage to environmental and cultural values.
- Objective 3:** Increase the community's resilience to bush fires by improving its preparedness, response and recovery.
- Objective 4:** Provide advice and strategies to plan, prepare and implement activities to effectively contain fires with the potential to cause damage to life, property, infrastructure and environmental, economic, cultural, agricultural and community assets.

1.4 The Planning Process

The Australia/New Zealand Standard AS/NZS 31000: 2018 Risk Management was used to guide the bush fire risk assessment process. This is outlined in Figure 1 below.

Figure 1: Overview of the risk assessment process

Chapter 2

Risk Assessment

2.1 Assets

An asset is something that is valued by the community. There are four main categories of assets considered in the BFRMP, each with subcategories.

2.1.1 Human settlement

- Residential areas including urban-bushland interface areas and rural properties; and
- Special Fire Protection areas including schools, hospitals, nursing homes, and tourist facilities.

2.1.2 Economic

- Agricultural - includes crops, bulk grain storage, grazing, horticulture, intensive animal production, livestock, fencing and major machinery sheds;
- Commercial - includes commercial services, Defence facilities, research facilities and ports and water transport;
- Electrical - including transmission lines, substations and electricity generation plants;
- Forestry assets – native forests, hardwood and softwood plantations;
- Industrial - includes general purpose factories, food processing factories, major industrial complexes, abattoirs, oil refineries and sawmills;
- Infrastructure – airports, communication towers, roads, railways, waste treatment plants, water treatment plants;
- Mining - combustible, non-combustible and underground;
- Recreational – community recreation facilities and major sporting and recreation complexes; and
- Water catchments.

2.1.3 Environmental

- Threatened Flora and Fauna – includes iconic species such as koalas and the Wollemi pine, threatened species, threatened ecological communities (TECs), and threatened populations at risk of extinction in NSW;
- Fire sensitive vegetation communities – includes regulated wetlands, RAMSAR wetlands and rainforest vegetation communities;
- Land covered by statutory conservation and biodiversity agreements;
- World Heritage and national and state heritage listed areas;
- Land with geological significance – includes land with high erosion potential, or geotechnical risk, karst landscapes and sand dunes;

- Environmentally significant land identified by an Environmental Planning Instrument - including Local Environment Plans (LEPs) and State Environmental Planning Policies (SEPPs); and
- Other locally important assets – including vegetation identified as bush fire refugia, bush regeneration areas and Assets of Intergenerational Significance (AIS).

Note: not all of these assets have quantitative risk assessment methodologies.

2.1.4 Cultural

- Aboriginal heritage – including items recorded in the Aboriginal Heritage Information Management System and predictive site locations from the Aboriginal Sites Decision Support Tool (ASDST);
- Non-Indigenous cultural heritage – items and places from the State Heritage Inventory, Section 170 Heritage and Conservation Register and the Historic Heritage Information Management System.

Assets across all four categories have been identified using geographic information system (GIS) data including land use classifications and cadastre (Lot boundaries), as well as local knowledge.

2.2 Neighbourhood Safer Places

A Neighbourhood Safer Place (NSP) is defined by section 62C of the *Rural Fires Act 1997* as “land or a building designated as a neighbourhood safer place”. NSPs provide a place of last resort for people during a bush fire. All designated NSP locations for NSW are available at www.rfs.nsw.gov.au.

The Riverina BFMC considered the number and location of Neighbourhood Safer Places (NSPs) within the BFMC area. All NSPs in Riverina BFMC area require ongoing treatment by the applicable land owner to ensure that the asset remains viable as a place of last resort for people during a bush fire. Therefore, all NSPs within the BFMC area are required to be treated and have been included in the Fuel Management Register.

2.3 Risk Identification and Analysis

This BFRMP is underpinned by a risk quantification methodology based on fire behaviour modelling (Phoenix RapidFire). The fire simulation process applies an ignition model, local historical weather and historical fire information to determine where fires are most likely to occur in the landscape. A Bayesian Decision Network model is used to quantify the bush fire risk to each asset in the landscape based on relevant vulnerability criteria.

Bush fire risks may also be identified during the process from qualitative assessment methodologies. For example where expert local knowledge identifies a significant area of concern, challenges in firefighting or locally significant values.

The risk maps for each asset category are provided in Appendix 3.

For a detailed description of the methodology used for assessing bush fire risk, please see [BFCC Policy 01/2023 - Bush Fire Risk Management and supporting documents](#), available on the NSW RFS website: www.rfs.nsw.gov.au.

DRAFT

Chapter 3

Treating Risk

3.1 Treatments

The purpose of risk treatment is to reduce the likelihood and/or harmful consequences of bush fire to the community and environment, through a process of selecting and implementing risk treatment options that modify the characteristics of the hazard, the community or the environment. There are three types of treatments considered in the BFRMP:

1. BFMC Wide Treatments;
2. Focus Area Treatments; and
3. Fuel Management Treatments.

BFMC members and land managers routinely implement risk treatment strategies in accordance with legislative requirements, policy and asset management. For example, vegetation management, restrictions on development in bush fire prone areas, bush fire education and fire suppression activities. We refer to these as BFMC Wide Treatments. These activities occur outside the BFRMP and reduce the bush fire risk to assets and communities throughout the BFMC area.

The risk assessment process applied in this BFRMP assists BFMCs in identifying strategic Fuel Management Treatments and Focus Area Treatments.

Fuel Management Treatments include hazard reduction burns and vegetation clearing. These are designed to protect life, property and the environment from intense bush fires. While they will not completely stop bush fires from starting and spreading, these treatments can help protect firefighters, assist with containment strategies and reduce the potential damage to community assets and environmental values.

Focus Areas are groups of assets in the landscape that the BFMC has identified as having significant or unacceptable risk. The BFMC has specifically identified Focus Area Treatments for these areas and they prioritize these treatments over all others.

3.1.1 BFMC Wide Treatments

BFMC wide treatments are activities which are undertaken to reduce the overall bush fire risk within the BFMC area.

The following table identifies the BFMC wide treatments applicable to the Riverina BFMC area.

TREATMENT	DESCRIPTION
Plan of Operations	Under Part 3 Division 4 Sections 52 and 53 of the Rural Fires Act 1997, BFMCs are required to prepare and submit to the BFCC a Plan of Operations and must review the Plan every two years. The Plan of Operations details the co-ordinated firefighting arrangements and fire management practices and ensures that each BFMC member is able to execute its role and specific responsibilities.
Treatments in the Fire Access and Fire Trail Plan Treatment Register	<p>Under section 52 of the Act, BFMCs must develop a Fire Access and Fire Trail (FAFT) Plan for their area and must review the FAFT Plan every five years.</p> <p>Fire trails are an important part of ensuring firefighters can access fires and safely contain them. Fire trails may also be used as fire control lines for hazard reduction burns; however this is not their primary purpose.</p> <p>In accordance with the NSW RFS Fire Trail Standards the BFMC may prepare a Treatment Register which sets out a schedule of works for the construction and maintenance of fire trails. The Standards provide that the Treatment Register is updated annually and typically forms part of a FAFT Plan.</p> <p>Treatments contained within the FAFT Plan Treatment Register (as amended from time to time) are BFMC Wide Treatments under this BFRMP.</p>
Ignition Prevention Plan	The BFMC will develop an Ignition Prevention Plan (IPP). The purpose of the IPP is to provide firefighting authorities, NSW Police and Local Authorities with localised strategies to prevent ignitions. In particular, deliberate or careless ignitions and illegal fires.
Land & Asset Management	There are organisational plans, standard policies, Regulations and procedures for the management of assets and/or land managed by BFMC members. For example, vegetation clearance around power lines, maintenance of public land, and agency-specific fire management plans.
Local Environmental Plans	<p>Local Environmental Plans (LEPs) guide planning decisions for local government areas. They do this through zoning and development controls, which provide a framework for the way land can be used.</p> <p>LEPs can be used to exclude development in significant bush fire risk areas or in areas where bush fire protection measures cannot be incorporated.</p>
Environmental Approval for all Hazard Reduction	Land management agencies will obtain environmental approval (through the Bush Fire Environmental Assessment Code, or other approval process) to undertake any activities that have the potential to impact the environment e.g. hazard reduction burning or vegetation removal. The environmental assessment process considers flora, fauna, threatened species, cultural assets, soil erosion, riparian areas, biodiversity fire regimes, weeds and air pollution (smoke).
Bush Fire Prone Land Mapping and Planning for Bush Fire Protection	<p>Section 10.3 of the Environmental Planning & Assessment Act 1979 requires the land subject to a BFRMP to be mapped in accordance with Guide for Bush Fire Prone Land Mapping. Bush Fire Prone Land Maps are used as a trigger mechanism to ensure that new development is approved in accordance with Planning for Bush Fire Protection (PBP).</p> <p>PBP sets planning specifications which aim to increase the likelihood of structures surviving a bush fire, and in combination with Australian Standard 3959 Building in Bush Fire Prone Areas which specifies building standards.</p> <p>All new development on Bush Fire Prone Land will be assessed in accordance with PBP.</p>

Hazard complaints	<p>It is the duty of land owners to prevent the occurrence of bush fires on, and to minimise the danger of the spread of bush fires on or from, their land.</p> <p>Under section 66 of the Rural Fires Act 1997, a Bush Fire Hazard Reduction Notice can be issued, directing a hazard be removed. This Notice can be issued to private and public landowners. If the Bush Fire Hazard Reduction Notice is not complied with, the NSW RFS will remove the hazard, and may pursue the cost from the landowner.</p> <p>Under Section 73 and Section 74E of the Act, the NSW RFS Commissioner may direct hazard reduction works to be undertaken.</p>
Community engagement	<p>This includes state-wide public awareness initiatives as well as local community interactions between fire agencies, land managers and local communities.</p>
BFMC Bush Fire Danger Period	<p>The Rural Fires Act 1997 sets the statutory Bush Fire Danger Period.</p> <p>A Fire Permit is required for burning activities during the Bush Fire Danger Period in Rural Fire districts and at all times in Fire and Rescue (FRNSW) districts around the state.</p> <p>Fire Permits help ensure fire is used safely during the Bush Fire Danger Period. A permit imposes conditions on the way a fire is lit and maintained, and can only be issued by authorised Permit Issuing Officers.</p> <p>The permit provides landholders who intend to burn, with the conditions they are to adhere with to ensure adequate and appropriate measures are in place, and that fires remain under control.</p>
Firefighting response	<p>All firefighting authorities in NSW have legislation, regulations, policies and procedures for responding to bush fire events within their area of jurisdiction.</p>
Prosecution of arsonists / offenders	<p>Under the Rural Fires Act 1997 persons may be prosecuted for a range of offences. These offences include:</p> <ul style="list-style-type: none"> • deliberately setting fire to the land of another person without consent; • lighting a fire without notifying the relevant authority; • breaching the conditions on a fire permit; • lighting a fire during a Total Fire Ban; • allowing fire to escape their property; or • other breaches of the Act.

Table 1: BFMC Wide Treatments

3.1.2 Fuel Management Treatments

Hazard reduction is an important component of managing bush fire risk. Hazard reduction involves removing or reducing the fuel (vegetation) in order to modify the potential fire behaviour, to reduce extreme bush fire behaviour and associated impact to firefighters and to community assets and values, to assist in fire suppression and to enable appropriate fire regimes to be implemented.

The BFRMP Fuel Management Register is a list of hazard reduction activities that the Riverina BFMC has identified as strategic treatments in the BFRMP. The fuel management treatments include prescribed burns, vegetation removal in BFMC-managed asset protection zones and the development or maintenance of fire breaks.

All hazard reduction activities listed in the Fuel Management Register are proposed to be completed within the five-year term of BFRMP, however, those activities that are linked to a Focus Area will be treated as a priority. The occurrence of bush fires will necessitate annual revision and reprioritisation of the treatment schedules.

See Appendix 2 for the Riverina BFMC Fuel Management Register.

3.1.3 Focus Area Treatments

The management of bush fire risks involves a coordinated approach from fire authorities, landowners, land managers, planning authorities, local councils and the community. Even with the combined resources of these stakeholders, it is still not possible or practical to actively treat all bush fire risks across the landscape. It is therefore important for communities and BFMCs to determine what areas will form the focus for the application of specific treatment strategies in this BFRMP.

Focus Areas were determined through an analysis of the quantitative risk assessment data, but also consider factors such as the social vulnerability of the community, access and egress and local significance.

There are six Focus Areas within the Riverina BFRMP. These are:

- LADYSMITH;
- OLD JUNEE;
- WAGGA WAGGA (Lloyd) WEST;
- WAGGA WAGGA (Gobba) NORTH;
- PLEASANT HILLS; and
- TARCUTTA.

These are areas that have been specifically identified as having an unacceptable risk and require additional, targeted treatment strategies within the five-year BFRMP.

There are four key objectives available to manage the bush fire risk to Focus Areas and each objective has a number of associated treatment strategies (Table 2). The BFMC has identified the most appropriate objectives and treatment strategies for each Focus Area. The Focus Area treatment strategies selected by the BFMC will be addressed annually as part of the BFMC Annual Works Program.

KEY OBJECTIVE	FOCUS AREA TREATMENT STRATEGY
Fuel Management Reduction or modification of bush fire fuel with the intent of slowing the spread of bush fire and aiding firefighting operations.	Asset Protection Zone
	Ignition Management Zone
	Strategic Fire Advantage Zone
	Land Management Zone
	Fire Break; Linear
	Fire Break; Transport Corridor
Ignition Prevention Prevention or reduction of bush fire ignitions (arson & accidental).	Grazing Program
	Community Engagement; Risk Awareness
	Access Restriction; addressed in BFMC Ignition Prevention Plan
Community Preparedness Measures to enhance community preparedness for bush fire in order to reduce risk to life and assets.	Patrol; addressed in BFMC Ignition Prevention Plan
	Community Engagement; Risk Awareness
	Community Engagement; Planning
	Community Engagement; Preparation
	Community Engagement; Community Resilience
Response Area specific response requirements in addition to standard procedures.	Community Engagement; Community Response
	Operational Readiness Arrangements; addressed in BFMC Plan of Operations
	Neighbourhood Safer Place; addressed in BFMC Plan of Operations
	Pre-Incident Plan; addressed in BFMC Plan of Operations
	Fire Access or Fire Trail; addressed in BFMC FAFT Plan

Table 2: Key objectives for treatment strategies.

For more information on Treatment Strategies see Annexure B of [BFCC Policy 01/2023 – Bush Fire Risk Management](#)

See Appendix 1 for the Riverina Focus Area descriptions, Key Objectives and Treatment Strategies.

3.2 Bush Fire Management Zones

Bush Fire Management Zones identified within the Riverina BFMC area have been mapped as part of the Fuel Management Register. These zones identify the fire management intent for a specific area. The five categories of Bush Fire Management Zones are:

- Asset Protection Zone (APZ);
- Strategic Fire Advantage Zone (SFAZ);
- Ignition Management Zone (IMZ)
- Land Management Zone (LMZ); and
- Fire Exclusion Zone (FEZ).

See Annexure C BFRMP Guidelines of [BFCC Policy 01/2023 – Bush Fire Risk Management](#) for further information on Bush Fire Management Zones including a description of the zones and their purposes.

3.3 Relationship with other Plans

Under section 52 of the *Rural Fires Act 1997*, each BFMC must prepare and submit to the Bush Fire Coordinating Committee a draft of each of the following:

- A bush fire management plan (defined to be both a BFRMP and a fire access and fire treatment plan (FAFT Plan)); and
- A Plan of Operations.

These BFMC planning documents should complement each other, however, a FAFT Plan prevails over the BFRMP to the extent of any inconsistency in accordance with section 59A(4) of the Act.

Treatments contained within the FAFT Plan Treatment Register (as amended from time to time) are BFMC Wide Treatments under this BFRMP.

Additionally, an Ignition Prevention Plan will be prepared for the BFMC. Other plans such as Community Protection Plans, agency specific Fire Management Strategies, or private property fire plans may be prepared, however as this BFRMP has been prepared in accordance with the Act, all other plans are subordinate to it.

Chapter 4

Communication and Consultation

4.1 Communication and Consultation

Community participation is an integral part of risk management. The BFMC undertook consultation with the community during the development phase of the BFRMP as outlined in Appendix 4. The Communication Strategy involved developing and implementing a process to address the needs, issues and concerns of stakeholders within the BFMC area in regards to the BFRMP. This involved member agencies engaging with their stakeholders to ensure their views are represented in the BFRMP and that they understand their own responsibility in risk management.

In accordance with section 57 of the *Rural Fires Act 1997*, the draft BFRMP was placed on public exhibition to provide an opportunity for the community to have formal input, and that input has been taken into account and reflected in the BFRMP.

This plan will be available from the RFS web site and must also be available for public inspection at, and be able to be obtained free of charge from, the office of the local authority for the area to which it relates during ordinary office hours.

Chapter 5

Performance Monitoring and Review

5.1 Monitoring and Review

This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC. The Riverina BFMC will also review this BFRMP as necessary to account for any changes in context or risk on account of changes to the BFMC area, organisational responsibilities or legislation; changes to the bush fire risk in the area; changes to the Treatment Register; or following a major fire event.

The BFMC is required to monitor progress towards the completion of treatment works listed in the BFRMP, and the timeliness of the works. This is done through an Annual Works Program and also an Annual Report. The BFRMP may also be audited at the request of the NSW RFS Commissioner or the BFCC.

DRAFT

Appendices

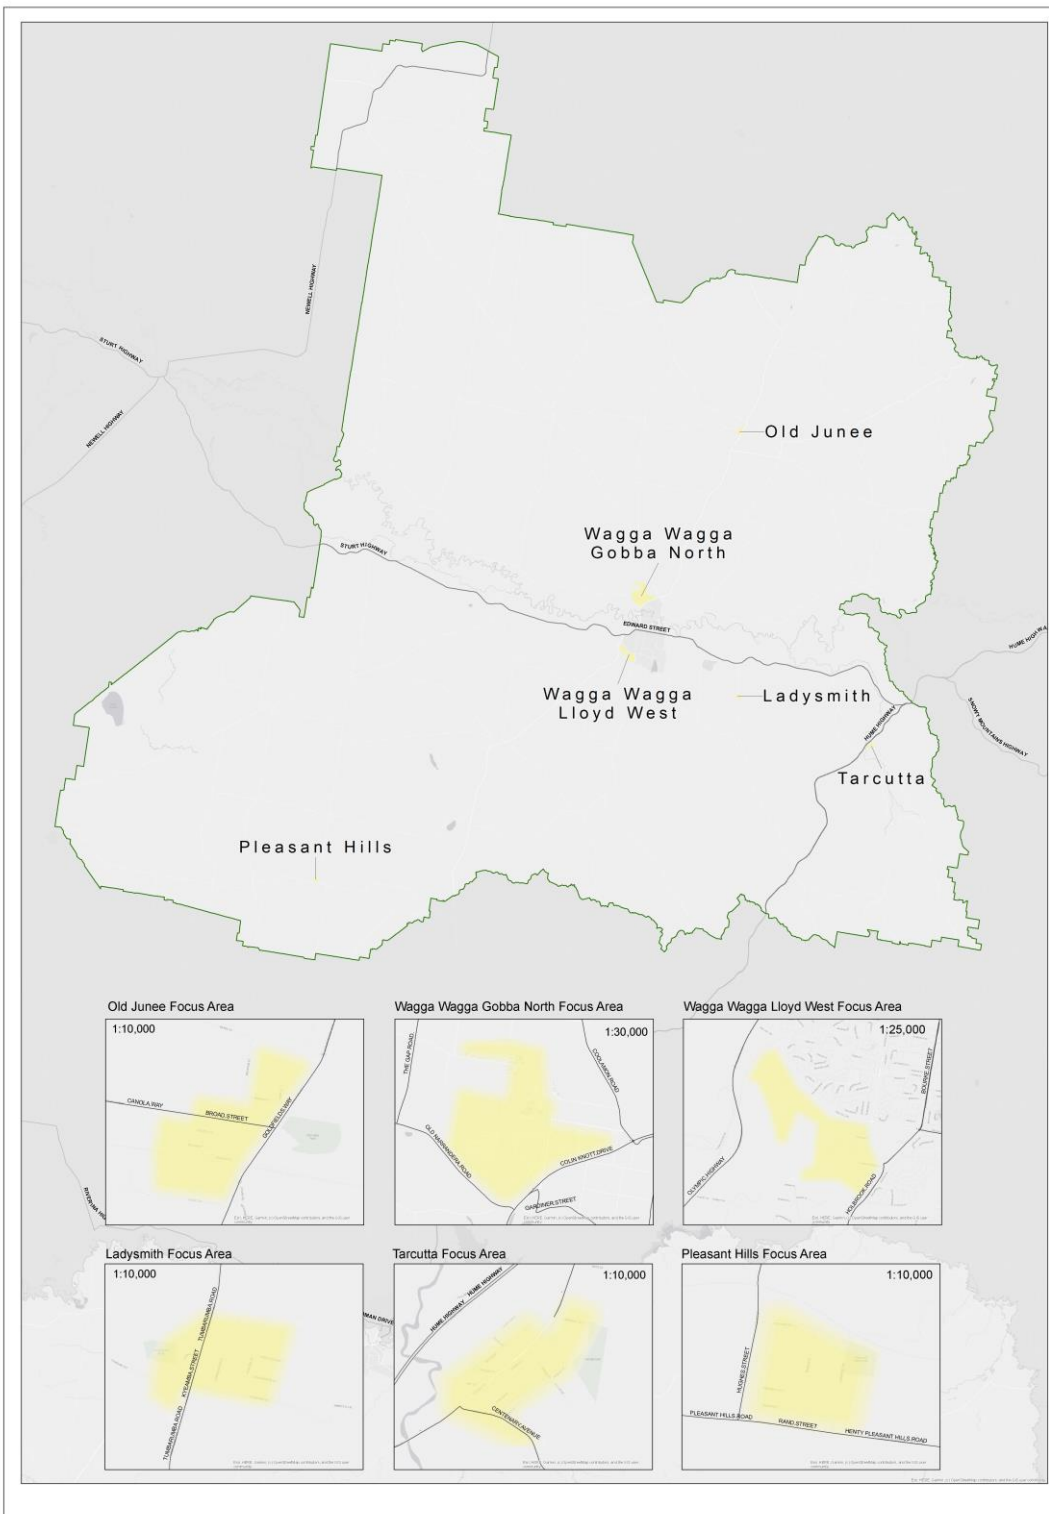

This BFRMP is supported by a number of appendices, including:

1. Focus Areas
2. Fuel Management Register (List)
3. Maps:
 - 3.1 Residential and Special Fire Protection Purpose Risk Current
 - 3.2 Economic Risk Current
 - 3.3 Aboriginal Predicted Sites Risk Current
 - 3.4 Environmental Risk Current
 - 3.5 Historic Heritage Risk Current
 - 3.6 Focus Areas and Fuel Management Register
4. Communication Strategy

Appendix 1

Focus Areas

FOCUS AREAS		
1.1 Ladysmith	1.2 Old Junee	1.3 Wagga Wagga (Lloyd) West
1.4 Wagga Wagga (Gobba) North	1.5 Pleasant Hills	1.6 Tarcutta

1.1 LADYSMITH

Risk Profile

The Riverina Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection (schools, health facilities, childcare etc.), economic, environmental and cultural assets and has identified the Ladysmith as a Focus Area.

Ladysmith is a small rural residential community, situated 20 kilometres southeast of Wagga Wagga, within the Wagga Wagga City Council Local Government Area, providing minor government services (education), basic retail services and railway tourism activities. The local hall provides a venue for community groups and meetings.

The majority of homes and properties located on the western side of Tumbarumba Road and are in the highest bush fire risk category. The land use surrounding the town is primarily agricultural including cropping and livestock. There is also a low risk to economic (agricultural) assets in the area.

Social vulnerability levels vary between very low and medium, the driving factor being household growth. Ladysmith has a permanent population of 215 (2021 Census).

Access and egress for residents is via the Tumbarumba Road north and south. Kyeamba Creek to the west of town limits access and egress. One minor road provides an alternative to the east. In the event of major incident access to and from Ladysmith may be affected.

The vegetation (agriculture, grassland (non-native), remnant and grassy woodland and wetlands) and flatland in this area contribute to wind driven fire, the bush fire risk and the potential for significant fire development. There is no record of significant bushfire in this area.

Bush fire is a key threatening process for many environmental assets. There is a risk that a bush fire event in this area would negatively impact, 1 Threatened Ecological Communities, 4 species of threatened fauna, 0 species of threatened flora and may include land under private property conservation agreements. There is also a risk that a bush fire could harm the cultural Aboriginal sites that maybe within this area.

The key BFMC objectives in Ladysmith are Fuel Management and Ignition Prevention. Focusing on the maintenance of Asset Protection Zones, Land Management Zones and Transport Corridor Fire Breaks, and, by implementing Ignition Prevention Strategies. This will be achieved through the provision of resources and the implementation of programs that will help residents better understand their risk and prepare for bushfire.

To increase resilience within the Focus Area the BFMC will identify specific operational response strategies for the environmental assets and other assets of concern. The BFMC fire access and fire trail network will be reviewed and maintained.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Ladysmith are listed in Table 1.

Table 1

BFMC OBJECTIVE	TREATMENT STRATEGY	REFERENCE
Fuel Management	Asset Protection Zone(s)	LS.AP
	Ignition Management Zone; prescribed burn	LS.IM
	Land Management Zone; prescribed burn	LS.LM
	Fire Break; Transport Corridor	LS.TF
Ignition Prevention	Patrol; addressed in BFMC Ignition Prevention Plan	LS.PT

DRAFT

1.2 OLD JUNEE

Risk Profile

The Riverina Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection (schools, health facilities, childcare etc.), economic, environmental and cultural assets and has identified the Old Junee as a Focus Area.

Old Junee is a rural residential area situated on the Goldfields Way north of Wagga Wagga and west of Junee in the Junee Shire Council Local Government Area. Junee 9 kilometres to the southeast provides services to this community.

The majority of homes and properties are located on flat to undulating land and are in the high to highest bush fire risk category. There is also a low to high risk to economic assets in the area, particularly agricultural assets and minor tourism.

Social Vulnerability is listed as medium to high in the town centre, driven by education and an indigenous population. Old Junee has a population of 254 (2021 Census).

The vegetation (grassy woodland, grassland (non-native) and agriculture) and flat to undulating terrain in this area contribute to wind driven fire, the bush fire risk and the potential for significant fire development. The last significant bushfire was in 2006.

The Goldfield Way provides access and egress in a north-south direction with a number of secondary roads linking Junee to the east and localities in the west. In the event of a major incident, the main highway may be affected.

Bush fire is a key threatening process for many environmental assets. There is a risk that a bush fire event in this area would negatively impact 2 Threatened Ecological Communities, 0 species of threatened fauna, 1 species of threatened flora and may include land under private property conservation agreements. There is also a risk that a bush fire could harm the cultural value of 77 Aboriginal sites that are known to occur within this area.

The key BFMC objectives in Old Junee are Fuel Management, Ignition Prevention and Community Preparedness. Focusing on the maintenance of Asset Protection Zones, Strategic Fire Advantage Zones, Linear Fire Breaks, Transport Corridor Fire Breaks and Ignition Management Zones, and, by undertaking Ignition Prevention Planning, and Community Engagement Planning and Preparation. This will be achieved through the provision of resources and the implementation of programs that will help residents better understand their risk and prepare for bushfire.

To increase resilience within the Focus Area, the BFMC will identify specific operational response strategies for the environmental assets and other assets of concern. The BFMC fire access and fire trail network will be reviewed and maintained.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Old Junee are listed in Table 2.

	Patrol; addressed in BFMC Ignition Prevention Plan	OJ.PT

DRAFT

1.3 WAGGA WAGGA (Lloyd) WEST

Risk Profile

The Riverina Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection (schools, health facilities, childcare etc.), economic, environmental and cultural assets and has identified Wagga Wagga (Lloyd) West as a Focus Area.

Wagga Wagga is a rural city adjacent to the Murrumbidgee River, in the Wagga Wagga City Council Local Government Area. The city is the major service hub for the surrounding region providing government services, health services, education, retail, industrial and agricultural services. Wagga Wagga is located on significant road and national transport networks including the main south rail line from Sydney to Melbourne. Wagga Wagga (Lloyd) West is an area adjacent to the Silverlite Reserve and Birrimal Conservation Area to the west.

The majority of homes and properties in Wagga Wagga (Lloyd) West are located on flat and undulating terrain and are in the moderate bush fire risk category. There is also a low risk to economic assets in the area, particularly to residential assets.

Social Vulnerability levels in Wagga Wagga (Lloyd) West vary between high and very high. Factors driving these levels include household growth, language, and length of residence. Wagga Wagga (Lloyd) West has a permanent population of 1,509 (2021 Census).

Access and egress for residents in Wagga Wagga (Lloyd) West is available via major highways accessible to the north and west. Suburban road networks into Wagga Wagga provides access and egress options. A rail corridor and nature reserve to the west restrict access and egress.

The vegetation (dry sclerophyll, grassy woodland and grassland (non-native) and flat to undulating terrain in this area contribute to wind driven fire, the bush fire risk and the potential for significant fire development. The last significant fire event in the area occurred in 2019.

Bush fire is a key threatening process for many environmental assets. There is a risk that a bush fire event in this area would negatively impact 2 Threatened Ecological Communities, 4 species of threatened fauna, 0 species of threatened flora and may include land under private property conservation agreements. There is also a risk that a bush fire could harm the cultural value of 48 Aboriginal sites that are known to occur within this area.

The key BFMC objectives in Wagga Wagga (Lloyd) West are Community Preparedness, Ignition Prevention, Fuel Management and Operational Response. Focusing on the maintenance of Asset Protection Zones and Ignition Management Zones, and, by undertaking Ignition Prevention Planning and Community Risk Awareness and preparation activities. This will be achieved through the provision of resources and the implementation of programs that will help residents better understand their risk and prepare for bushfire.

To increase resilience within the Focus Area the BFMC will identify specific operational response strategies for the environmental assets and other assets of concern. The BFMC fire access and fire trail network will be reviewed and maintained.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Wagga Wagga (Lloyd) West are listed in Table 3.

DRAFT

1.4 WAGGA WAGGA (Gobba) NORTH

Risk Profile

The Riverina Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection (schools, health facilities, childcare etc.), economic, environmental and cultural assets and has identified the Wagga Wagga (Gobba) North as a Focus Area.

Wagga Wagga is a rural city adjacent to the Murrumbidgee River, in the Wagga Wagga City Council Local Government Area. Wagga Wagga (Gobba) North focus area is situated in the North West of the city with a mix of residential, agricultural properties. Services in this area include government agencies and the Charles Sturt University Campus. The majority of homes and properties in Wagga Wagga (Gobba) North are located on flat and undulating terrain and are in the high bush fire risk category. There is also a highest risk to economic assets in the area, particularly residential, education and agricultural assets.

Social Vulnerability levels in Wagga Wagga (Gobba) North vary between high and very high. Factors driving these levels include language, household growth, and length of residence. Wagga Wagga (Gobba) North Focus Area has a permanent population of 11,150 (2021 Census – includes: Gobbagombalin, Estella, Charles Sturt University and Booroma).

Access and egress is possible via the Olympic Highway to the east. The Murrumbidgee River into Wagga Wagga City to the south has two crossings. Secondary road access is available to the north and west. A significant incident from the northwest may impact access and egress in this area.

The vegetation (dry sclerophyll forest, grassy woodlands and grassland (non-native) and agriculture) and flat to undulating terrain in this area contribute to wind driven fire, the bush fire risk and the potential for significant fire development. The last significant fire event in the area occurred in 2019.

Bush fire is a key threatening process for many environmental assets. There is a risk that a bush fire event in this area would negatively impact 9 Threatened Ecological Communities, 4 species of threatened fauna, 0 species of threatened flora and may include land under private property conservation agreements. There is also a risk that a bush fire could harm the cultural value of 42 Aboriginal sites that are known to occur within this area.

Key BFMC objectives in Wagga Wagga (Gobba) North are Community Preparedness, Fuel Management and Ignition Prevention. Focussing on the maintenance of Transport Corridor Fire Breaks, Linear Fire Breaks and Ignition Management Zones, and by undertaking Community Resilience activities. This will be achieved through the provision of resources and the implementation of programs that will help residents better understand their risk and prepare for bushfire.

To increase resilience within the Focus Area the BFMC will identify specific operational response strategies for the environmental assets and other assets of concern. The BFMC fire access and fire trail network will be reviewed and maintained.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Wagga Wagga (Gobba) North are listed in Table 4.

DRAFT

1.5 TARCUTTA

Risk Profile

The Riverina Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection (schools, health facilities, childcare etc.), economic, environmental and cultural assets and has identified the Tarcutta as a Focus Area.

Tarcutta is a rural residential community located in the Wagga Wagga Local Government Area. The town is adjacent to the Hume Highway supporting minor tourism and provision of services to the local agricultural community including education, retail, fuel and mechanical services. Tarcutta is major hub for National Heavy Vehicle logistical operations as it is approximately half way between Sydney and Melbourne.

The majority of homes and properties are located on gentle sloping topography and are in the highest bush fire risk category. There is highest risk to economic assets in the area including tourism & logistical infrastructure. The vegetation (cleared agricultural land intermixed with forested wetlands and grassy woodlands) in this area contribute to wind driven fire, the bush fire risk and the potential for significant fire development. The last significant bushfire was in 2013.

Social Vulnerability level is very low to high with the driving factor household income and unoccupied dwellings. Tarcutta has a permanent population of 206 people (2021 Census).

Access and egress for residents is good, with access to a major road transport corridor and other major roads in the area.

Bush fire is a key threatening process for many environmental assets. There is a risk that a bush fire event in this area would negatively impact 7 Threatened Ecological Communities, 2 species of threatened fauna, 0 species of threatened flora and may include land under private property conservation agreements.

There is also a risk that a bush fire could harm the cultural value of 5 Aboriginal sites that are known to occur within this area.

A key BFMC objective in Tarcutta is Community Preparedness, Ignition Prevention and Fuel Management. Focussing on the maintenance of Strategic Fire Advantage Zones, Asset Protection Zones, Grazing Programs, Transport Corridor Fire Breaks and Ignition Management Zones, and by undertaking Community Planning and Preparation activities. This will be achieved through the provision of resources and the implementation of programs that will help residents better understand their risk and prepare for bushfire.

To increase resilience within the Focus Area the BFMC will identify specific operational response strategies for the environmental assets and other assets of concern. The BFMC fire access and fire trail network will be reviewed and maintained.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Tarcutta are listed in Table 5.

DRAFT

1.6 PLEASANT HILLS

Risk Profile

The Riverina Bush Fire Management Committee (BFMC) has assessed the risk to residential, special fire protection (schools, health facilities, childcare etc.), economic, environmental and cultural assets and has identified the Pleasant Hills as a Focus Area.

Pleasant Hills is a rural village situated 26 kilometres west of Henty NSW surrounded by flat agricultural land in the Lockhart Shire Council Local Government Area. Services in the village include a community hotel providing Local Post Office (LPO) and general store services, a public primary school, and a Lutheran Church.

The majority of homes and properties are located on flat land with areas of high to highest bush fire risk category. There is also a moderate to high risk to economic assets in the area, particularly agricultural assets.

Social Vulnerability level is very low to low, with the driving factors level of education and unoccupied dwellings. Pleasant Hills has a permanent population of 127 (2021 Census).

The vegetation (grassy woodland and grassland (non-native) and flat terrain in this area contribute to wind driven fire, the bush fire risk and the potential for significant fire development. There is no history of significant fires in this area.

Access and egress is available to the north, east, and west via sealed roads. A number of minor and dirt roads provide alternative routes. In the event of a major incident, access and egress may be affected.

Bush fire is a key threatening process for many environmental assets. There is a risk that a bush fire event in this area would negatively impact 7 Threatened Ecological Communities, 1 species of threatened fauna, 0 species of threatened flora and may include land under private property conservation agreements.

There is also a risk that a bush fire could harm the cultural Aboriginal sites that maybe within this area.

Key BFMC objectives in Pleasant Hills are Fuel Management and Ignition Prevention. Focussing on the maintenance of Linear Fire Breaks, Asset Protection Zones, Ignition Management Zones, Transport Corridor Fire Breaks and Land Management Zones. This will be achieved through the provision of resources and completion of hazard reduction works to better prepare the community for bushfire.

To increase resilience within the Focus Area the BFMC will identify specific operational response strategies for the environmental assets and other assets of concern. The BFMC fire access and fire trail network will be reviewed and maintained.

The key Bush Fire Risk Management Plan Objectives and Treatment Strategies for Pleasant Hills are listed in Table 6.

*Strategy: GP (Grazing Program); IMZ (Ignition Management Zone); LFB (Linear Firebreak); LMZ (Land Management Zone), SFAZ (Strategic Fire Advantage Zone), TCFB (Transport Corridor Fire Break). See Annex C BFCC Policy 01/2023 for further information on bush fire management zones including a description of the zones and their purposes.

The Transport Corridor Fire Breaks identified by Transport for NSW along the state road network, noted in the Fuel Management Register will be managed in line with the Transport for NSW Roadside Clearing Guidelines (defined by the back of the table drain or 4m from the edge of asphalt, or 1.2m beyond the back of the safety barrier).
