Glossary

Assets: anything valued by the community which includes houses, crops, heritage buildings and places, infrastructure, the environment, businesses, and forests, that may be at risk from bush fire.

Bush Fire: a general term used to describe fire in vegetation, includes grass fire.

Bush Fire Hazard: the potential severity of a bush fire, which is determined by fuel load, fuel arrangement and topography under a given climatic condition.

Bush Fire Risk: the chance of a bush fire igniting, spreading and causing damage to the community or the assets they value.

Bush Fire Risk Management: a systematic process that provides a range of treatments which contribute to the wellbeing of communities and the environment, which suffer the adverse effects of wildfire/bush fire.

Bush Fire Threat: potential bush fire exposure of an asset due to the proximity and type of a hazard and the slope on which the hazard is situated.

Consequence: outcome or impact of a bush fire event.

Fire Fighting Authorities: the NSW Rural Fire Service, NSW Fire Brigades, the National Parks and Wildlife Service and Forests NSW.

Likelihood: the chance of a bush fire igniting and spreading.

Major Bush Fire: A bush fire which requires the attendance of multiple brigades or causes damage to property or injury to one or more persons.

Display area: geographic area determined by the Bush Fire Management Committee which is used to provide a suitable area and scale for community participation and mapping display purposes.

Recovery costs: the capacity of an asset to recover from the impacts of a bush fire.

Risk Acceptance: an informed decision to accept the consequences and the likelihood of a particular risk.

Risk Analysis: a systematic process to understand the nature of and to deduce the level of risk.

Risk Assessment: the overall process of risk identification, risk analysis and risk evaluation.

Risk Identification: the process of determining what, where, when, why, and how something could happen.

Risk Treatment: the process of selection and implementation of measures to modify risk.

Vulnerability: the susceptibility of an asset to the impacts of bush fire.

Chapter 1. Introduction

1.1 Background

Under the *Rural Fires Act 1997* the Bush Fire Coordinating Committee (BFCC) must constitute a Bush Fire Management Committee (BFMC) for each area in the State, which is subject to the risk of bush fires. Each BFMC is required to prepare and submit to the BFCC a draft Bush Fire Risk Management Plan (BFRMP).

A BFRMP is a strategic document that identifies community assets at risk and sets out a five-year program of coordinated multi-agency treatments to reduce the risk of bush fire to the assets. Treatments may include such things as hazard reduction burning, grazing, community education, fire trail maintenance and establishing community fireguard groups.

Annual programs to implement the treatments identified in this plan will be undertaken by the relevant land managers and fire fighting authorities.

In exercising its functions under the *Rural Fires Act 1997*, including the preparation of a draft bush fire risk management plan, the Hunters Hill Lane Cove Parramatta Ryde BFMC is required to have regard to the principles of ecologically sustainable development (ESD).

This document and the accompanying maps together form the BFRMP for the Hunters Hill Lane Cove Parramatta Ryde BFMC area.

This BFRMP has been prepared by the Hunters Hill Lane Cove Parramatta Ryde BFMC and covers both public and private lands. This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC.

The BFCC recognises that climate change has the potential to increase bush fire risk. The risk assessment process applied in this BFRMP is based on current climatic conditions. The BFCC will monitor information on climate change and will modify the process when necessary.

1.2 Aim and Objectives

The **aim** of this BFRMP is to minimise the risk of adverse impact of bush fires on life, property and the environment.

The **objectives** of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property and the environment;
- manage fuel to reduce the rate of spread and intensity of bush fires, while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

1.3 Description of the Hunters Hill Lane Cove Parramatta Rvde BFMC Area

1.3.1 Location and land tenure

The Hunters Hill Lane Cove Parramatta Ryde *BFMC* area occupies the North Western shore of Sydney Harbour and extends along the northern side of the Parramatta River up to the M2 Motorway.

The area covered by the Hunters Hill Lane Cove Parramatta Ryde BFMC is 14,036 hectares and includes the land tenures outlined in Table 1.

Land Manager	% of BFMC area			
National Parks & Wildlife Service (NPWS)	1%			
Forestry Corporation of NSW	N/A			
Trade and Investment – Crown Lands	5%			
Local Government	14%			
Private	80%			
Other	N/A			

Table 1-1 Land Tenure

1.3.2 Climate and bush fire season

The typical / average climate in the Hunters Hill Lane Cove Parramatta Ryde BFMC area is for uniform rainfall throughout the year, although higher rainfall can be experienced in the months of February to March. The Bush Fire season generally runs from October to March, in which high daytime temperatures are expected.

Prevailing weather conditions associated with the Bush Fire season in the Hunters Hill Lane Cove Parramatta Ryde BFMC area are strong North West winds, low humidity and high temperatures. These conditions combined with predominantly dry sclerophylly vegetation dramatically influence the behaviour of Bush Fires in the area. Although Bush Fires may occur at any time of the year, the highest probability of Bush Fires occurs in December and January.

1.3.3 Population and demographic information

The population of the Hunters Hill Lane Cove Parramatta Ryde BFMC area is approximately 387,958 people. The major population centres are Hunters Hill, Parramatta, Harris Park Ryde, Epping, Carlingford and Lane Cove.

1.3.4 History of bush fire frequency and ignition cause

The Hunters Hill Lane Cove Parramatta Ryde BFMC area has on average 8 Bush Fires per year, of which none can be considered a major fire.

The main sources of ignition in the Hunters Hill Lane Cove Parramatta Ryde BFMC areas are deliberate ignitions, campfires, fire by misadventure & lightning strikes.

Chapter 2. Identifying and Assessing the Bush Fire Risk

2.1 Process

The Australia/New Zealand Standard ISO 31000:2009 Risk Management - Principles and guidelines was used as the basis for the risk assessment process. See Figure 2.1 for the steps involved. For a detailed description of the process undertaken see the Bush Fire Risk Management Planning Guidelines for Bush Fire Management Committees on the RFS website: www.rfs.nsw.gov.au.

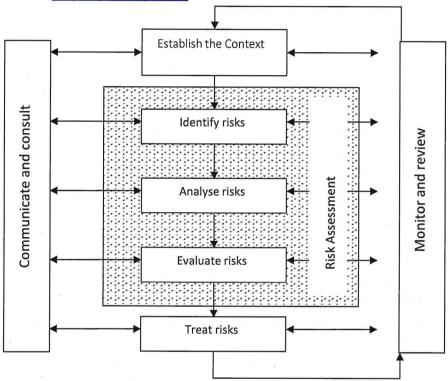

Figure 2-1 Overview of the risk assessment process

2.2 Communication and Consultation

Community participation is an integral part of risk management. The Community Participation Strategy involved developing and implementing a process to address the needs, issues and concerns of stakeholders within the BFMC area in regard to the BFRMP.

See Appendix 1 for the Community Participation Strategy used by the Hunters Hill Lane Cove Parramatta Ryde BFMC in preparing this BFRMP.

2.3 Identifying the Bush Fire Risk

Identifying the level of bush fire risk firstly involved identifying important community assets considered to be at risk from bush fire in the Hunters Hill Lane Cove Parramatta Ryde BFMC area, and then assessing the likelihood and consequence ratings.

2.3.1 Assets

BFMC members and the community, identified assets within the Hunters Hill Lane Cove Parramatta Ryde BFMC that they believed were at risk of bush fire.

The assets were divided into four asset types:

Human settlement

- Residential areas including urban bushland interface areas and rural properties;
- Special Fire Protection areas including schools, hospitals, nursing homes, and tourist facilities; and
- Other human settlement areas including commercial and industrial areas where distinct from major towns.
- Neighbourhood Safer Place (NSP) is defined by the Rural Fires Act 1997 as land or a building designated as a neighbourhood safer place under section 62C. NSPs provide a place of last resort for people during a bush fire. All designated NSP locations for NSW are available at www.rfs.nsw.gov.au.

Economic

- Agricultural; e.g. major silos, regional saleyards, cropping/grazing land;
- Commercial/industrial e.g. major industries, waste treatment plants, sawmills;
- Infrastructure e.g. large power lines, gas and oil pipelines, railway lines, electricity substations, communication facilities;
- Tourist and recreational e.g. tourist sites and facilities, resorts, retreats;
- Mines:
- Commercial forests e.g. pine plantations, eucalypt plantations and commercial native forests;
- Drinking water catchments; and
- Military facilities.

Environmental

- Threatened species, populations and ecological communities and Ramsar wetlands; and
- Locally important species and ecological communities, such as species and ecological communities especially sensitive to fire.

Cultural

- Aboriginal significance Aboriginal places and items of significance;
- Non-indigenous heritage places and items arising from the early occupation of NSW by European or other non-indigenous settlers; and
- Other cultural assets community halls, clubs and recreational facilities.

See Appendix 2 for the full list of assets identified in the Hunters Hill Lane Cove Parramatta Ryde BFMC area. See maps 1-3 for the location of assets to be treated under this BFRMP

2.3.2 Assessing the Bush Fire Risk - Consequence

Once the assets were identified, the consequence of a bush fire impacting on these assets was assessed.

See Appendix 2 for the consequence ratings assigned to each asset identified in the Hunters Hill Lane Cove Parramatta Ryde BFMC area.

The different asset types had different assessment processes used to determine the consequence. These processes are identified below.

Human settlement

A potential fire behaviour model using vegetation type, slope and separation distance was used to produce a threat rating for human settlement assets. The vulnerability of the asset to a bush fire was also assessed and a rating assigned. These ratings were then used to assess the consequence of a bush fire impacting upon a human settlement asset.

Special Fire Protection (SFP) assets were considered inherently more vulnerable to bush fire due to mobility capacity, knowledge or other issues relating to their inhabitants, (e.g. the elderly, infirm, children or tourists) and therefore stricter requirements for vulnerability assessment and rating were applied. Due to circumstances surrounding NSPs and their use during a bush fire, stricter requirements for vulnerability assessment and rating will also apply to these assets.

Economic

The level of economic impact e.g. local, regional or state, as well as the economic recovery costs (how long and complicated a financial recovery will be) of the asset were identified. These ratings were used to assess the consequence of a bush fire impacting upon an economic asset.

Environmental

Environmental assets with known minimum fire threshold were assessed to determine if they were at risk of a bush fire within the five year life of the BFRMP using fire history and fire threshold data. Those environmental assets which were within or above the fire threshold were not assessed in the BFRMP, as the negative impact of a fire within the five year period was determined as being low and may even be of benefit to the asset and surrounding habitat.

The vulnerability of an environmental asset was determined by its conservation status and its geographic extent (distribution across the landscape). Vulnerability and potential impact of bush fire were used to assess the consequence of a bush fire impacting upon an environmental asset.

<u>Cultural</u>

For non-indigenous historical, Aboriginal and other cultural assets a potential fire behaviour model using fuel load, slope and proximity was used to produce a threat rating. The physical vulnerability of the asset to a bush fire was also assessed. These ratings were then used to assess the consequence of a bush fire impacting upon a cultural asset.

2.3.3 Assessing the Bush Fire Risk - Likelihood

For all asset types the likelihood of a bush fire occurring was assessed. This involves considering fire history, including ignition cause and patterns, known fire paths, access, containment potential and potential fire run (size of the vegetated area). See Appendix 2 for the likelihood ratings assigned to each asset identified in the Hunters Hill Lane Cove Parramatta Ryde BFMC area.

2.3.4 Identifying the level of risk

The consequence and likelihood ratings were then used to identify the level of risk. See Appendix 2 for the risk ratings assigned to each asset identified in the Hunters Hill Lane Cove Parramatta Ryde BFMC area.

2.3.5 Evaluating the Bush Fire Risk

Once the risk ratings for each asset were identified, they were evaluated to:

- a) confirm that risk levels identified in the risk analysis process are appropriate and reflect the relative seriousness of the bush fire risk;
- b) identify which assets require treatments; and
- c) identify treatment priorities.

2.3.6 Prioritising Treatments

No organisation has limitless resources to deal with adverse risk. It is therefore necessary to define priorities. The bush fire risk ratings determined were used to prioritise the risk treatments, i.e. areas of extreme risk were considered first for treatment, then very high, then high then medium then low.

Treatments used within this five-year Bush Fire Risk Management Plan can be applied annually, periodically throughout the life of the Plan, as deemed necessary due to changing risk or as a single targeted event.

2.3.7 Risk Acceptability

Risks below a certain level were assessed as not requiring treatment within the life of this plan as defined within Table 2-1. This is due to a combination of public education; general mitigation works and Fire agencies response times and resources availability. Within the Hunters Hill Lane Cove Parramatta Ryde BFMC area the level of acceptability is 'Medium'. Areas of medium and low risk are likely to be managed by routine procedures and so do not require a specific application of resources.

Risk Rating	Mitigation						
Extreme							
Very High	Application of specific and coordinated treatment strategies as defined within this Bush Fire Risk Management Plan						
High	Wallagement Flam						
Medium	Land owners / managers may apply the identified treatment strategy as part of their routine annual works,						
Low	maintenance and inspection programs						

Table 2-1 Risk acceptability and mitigation

All NSPs for a BFMC area will require ongoing treatment by the applicable landowner to ensure that the asset remains viable as a place of last resort for people during a bush fire. Therefore, all NSP assets are allocated specific treatments in this Plan, regardless of the level of bush fire risk identified and the risk acceptability nominated by the Hunters Hill Lane Cove Parramatta Ryde BFMC.

Chapter 3. Treating the Risk

3.1 Bush Fire Management Zones

Bush Fire Management Zones were identified within the Hunters Hill Lane Cove Parramatta Ryde BFMC area and mapped (see maps 1-4). These zones identify the fire management intent for a specific area. See Table 3.1 for descriptions of the zones and their purposes. The four categories of Bush Fire Management Zones are:

- Asset Protection Zone (APZ);
- Strategic Fire Advantage Zone (SFAZ);
- Land Management Zone (LMZ); and
- Fire Exclusion Zone (FEZ).

Some of these zones (usually Land Management Zones) may be further classified within this category by the land manager, e.g. LMZ -Heritage Management Zone (NPWS).

LMZs that have been identified as a polygon on the map will have defined management objectives. Below is a list of each identified LMZ and its associated management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise Bush Fire impacts on undefended assets.	As per RFS document Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the speed and intensity of Bush Fires, and reduce the potential for spot fire development; To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone. and/or Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone. and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: Topography Aspect Spotting propensity Location of adjacent firebreaks Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude Bush Fires.	N/A	Variable dependant on size of fire sensitive area requiring protection.

Table 3-1 Bush Fire Management Zones

NB: OFH refers the Overall Fuel Hazard Guide as described in the document published by (Dept. of Sustainability and Environment 3rd ed. 1999); State-wide procedures for assessment of fuel hazard will be developed in conjunction with the BFCC.

Note: All areas that are not mapped or described as APZs or SFAZs are considered as LMZs.

3.2 BFMC Wide Treatments

BFMC wide treatments are activities which reduce the overall bush fire risk within the BFMC area and are undertaken on an ongoing basis as part of normal business. These treatments are not linked to specific assets in the BFRMP, rather they are applied across all or part of the BFMC area as designated by legislation or agency policy. BFMC wide treatments include the following:

Reviewing the bush fire prone land map

These maps identify bush fire prone land and are used to trigger whether a development application is assessed using *Planning for Bush Fire Protection*¹.

Ensuring developments in bush fire prone land comply with Planning for Bush Fire Protection

This assessment process requires new applications for development to include bush fire protection measures.

Using the Local Environment Plan/s (LEPs) to control developments in areas with a bush fire risk

LEPs can be used to exclude development in extreme bush fire risk areas or where bush fire protection measures cannot be incorporated.

Varying the standard bush fire danger period as required

In years where the weather is particularly adverse the bush fire danger period may be brought in early or extended. This is assessed every year by the BFMC.

Requiring permits during the bush fire danger period

In the bush fire danger period, a fire safety permit is required to light a fire in the open. Permits specify conditions such as firefighting equipment that must be on site, or restrict burns based on weather conditions.

Prosecution of arsonists/offenders

Under the *Rural Fires Act 1997* persons may be prosecuted for breaching the conditions on a fire permit, lighting a fire during a Total Fire Ban, allowing fire to escape their property, or other breaches of the Act.

Investigation of bush fire cause

All bush fires which do not have a known cause are investigated to identify how they started.

¹ NSW Rural Fire Service 2006 Planning for Bush Fire Protection: A guide for councils, planners, fire authorities and developers.

Normal fire suppression activities

Responding to bush fire is a normal business activity for the fire fighting authorities.

Assessing and managing compliance with strategic fire fighting resource allocation provisions

Strategic fire fighting resource allocation provisions is the process used to identify the number of stations, brigades and appliances required in an area, and considers members, training, assets and hazards.

Preparation of a S52 Operations Coordination Plan

The Operations Coordination Plan is prepared biannually and sets out how coordinated fire fighting will occur. It includes specific operational restrictions on fire fighting techniques in certain areas, where fires will be managed from, and how agencies involved can communicate during operations.

• Fire Management Plans or Plans of Management

Some land management agencies have developed fire management plans or plans of management with specific fire or fuel management strategies, for example a Forestry Corporation of NSW Regional Fuel Management Risk Plan, a NPWS Fire Management Strategy. These publicly exhibited plans form the basis for operational fire planning on public parks, reserves and forests.

Bush Fire Hazard Complaints

If someone is concerned about possible bush fire hazards on a neighbouring property or any other land, then this can be reported to the RFS Commissioner or their local RFS Fire Control Centre. The complaint will be investigated and may result in a notice being issued to the landowner or manager to reduce the hazard.

3.3 Asset Specific Treatments

There are five broad strategy groups available to treat the bush fire risk to assets identified in the BFRMP.

The types of asset specific treatments in each strategy group used in the Hunters Hill Lane Cove Parramatta Ryde BFMC areas are listed below. A full list of the treatment strategies in the Hunters Hill Lane Cove Parramatta Ryde BFMC area are in Appendix 3.

Strategy	Targeted treatments used in the Hunters Hill Lane Cove Parramatta Ryde BFMC area					
Ignition Management	Suspend fire generated activities on days of very high to extreme fire danger. Undertake patrols of National Parks during TOBANS. Close National Parks and managed bushland reserves as required.					
Hazard Reduction	Manage fuel loads; bushland structure and accessibility Perform annual maintenance along APZ and maintain annual Hazard Reduction Works Program Manage land as per agency Fire Management Plans					
Community Education	Manage CFU as per FRNSW policy Community information, (Letterbox drops)					
Preparedness	Inspect and maintain fire trail as required Manage CFU as per FRNSW policy Review Pre-incident plans Undertake site inspections as required					

Table 3-2 Asset specific treatments used in the Hunters Hill Lane Cove Parramatta Ryde BFMC area

3.4 Fire Thresholds

The vegetation in the Hunters Hill Lane Cove Parramatta Ryde BFMC area was classified into fire threshold categories (Table 3.3).

Vegetation formation	Minimum SFAZ Threshold	Minimum LMZ Threshold	Maximum Threshold	Notes
Rainforest	NA	NA	NA	Fire should be avoided.
Alpine complex	NA	NA	NA	Fire should be avoided.
Wet Sclerophyll forest (shrubby sub formation)	25	30	60	Crown fires should be avoided in the lower end of the interval range.
Wet Sclerophyll forest (grassy sub formation)	10	15	50	Crown fires should be avoided in the lower end of the interval range.
Grassy woodland	5	8	40	Minimum interval of 10 years should apply in the southern Tablelands area. Occasional intervals greater than 15 years may be desirable.
Grassland	2	3	10	Occasional intervals greater than 7 years should be included in coastal areas. There was insufficient data to give a maximum interval; available evidence indicates maximum intervals should be approximately 10 years.
Dry sclerophyll forest (shrub/grass sub formation)	5	8	50	Occasional intervals greater than 25 years may be desirable.
Dry sclerophyll forest (shrub sub formation)	7	10 30		Occasional intervals greater than 25 years may be desirable.
Heathlands	7	10	30	Occasional intervals greater than 20 years may be desirable.
Freshwater wetlands	6	10	35	Occasional intervals greater than 30 years may be desirable.
Forested wetlands	7	10	35	Some intervals greater than 20 years may be desirable.
Saline wetlands	NA	NA	NA	Fire should be avoided.
Semi-arid woodlands (grassy sub formation)	6	9	No max	Not enough data for a maximum fire interval.
Semi-arid woodlands (shrubby sub formation)	10	15	No Max	Not enough data for a maximum fire interval.
Arid shrublands (chenopod sub formation	NA	NA	NA	Fire should be avoided.
Arid shrublands (acacia sub formation)	10	15	No Max	Not enough data for a maximum fire interval.

Table 3-3 Fire Thresholds for Vegetation Categories

3.5 Annual Works Programs

The land management agencies and firefighting authorities responsible for implementing the treatments identified in this plan will include those treatments in their annual works programs detailing how, when, and where the required activities will be undertaken.

The Hunters Hill Lane Cove Parramatta Ryde BFMC has four annual works programs, these are:

- 1. Prescribed Burning (Broad area & Piles);
- 2. Mechanical and Manual works:
- 3. Community Engagement / Education; and
- 4. Fire Access Fire Trails (FAFT) Annual inspections and maintenance as required.

3.6 Implementation

When the treatments identified in this BFRMP are implemented there are a number of issues that need to be considered by the responsible agency including environmental assessments and approvals, smoke management and prescribed burn plans.

Chapter 4. Performance Monitoring and Reviewing

4.1 Review

This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC. The Hunters Hill Lane Cove Parramatta Ryde BFMC will also review this plan as necessary to account for any changes in context or risk. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

4.2 Monitoring

The BFMC is required to monitor progress towards the completion of treatment works listed in the BFRMP, and the timeliness of the works.

4.3 Reporting

The BFMC is required to report annually to the BFCC on its progress in implementing the bush fire risk management activities identified in this plan.

4.4 Performance Measurements

State wide performance measurements which are linked to the BFRMP have been identified by the BFCC. All BFMCs must use these to monitor and report on their success in reducing the bush fire risk in their BFMC area.

Hunters Hill, Lane Cove, Parramatta, Ryde BFMC Bush Fire Risk

HUNTERS HILL - Map Display Area

Map 1 of 4

Bush Fire Risk Management Plan (BFRMP) has been prepared by the Hanler Lane Core, Parramatz, Ryde Bush Fire Management Committee (BFMC want to section 52 of the Rural Fire Act 1997,

The aim of this BFAMP is to reduce the adverse impact of bush fires on life, proper and the environment.

 reduce the number of human-induced bush fire ignitions that cause do properly of the streamment.

 manage hal to reduce the agreed and intensity of both first while minimal environmentalizedagical impacts;
 reduce the continuity's vulnerability to both first by improving its preparation and
 officiently contain they with a potential to cause damage to life, property and it

This map farms pair of the BFRMP for the Hunters HE, Late Gove, Partinatta, Ryds BFMC, covering the local powerment of area(s) of . It should be viswed in conjuncsion the accompanying BFRMP document which provides Earther databs on the BFMC

Newton:

Under Die Russi Fines det 1937 bis plan must he teolessed and updated subhin sech

Treatment

Specific trustments assigned to assets in the Hundern Hill, Lane Cove, Parametta, Rydo area are based in the treatments table and finised to the assets which they are designed to protect, Standard BFMC wide treatments (a.e. not finised to a specific asset) which occur on an engoing basis within the BFMC area are: - medication the bush for anous lated mass:

 ensuring developments in the best-fire prone-land comply with Planning for Bush-Fire Projection;
 using ON-Local Environment Plants (LEPs) to control development in areas with a

verying the standard bosh fire danger period as required;
 requiring permits during bosh fire danger periods.

requiring parmits during bush are danger per prosecution of acromists/offenders incretionation of both fire naves

prestigation of both fre cause; normal fre suppression activities;

norms are suppression surviver; assessing and managing campliance with strategic fre-fighting resource aboca anagement systems; of a SSS Department Constitution Plans

Note on LM2: All areas not specifically mapped as an AP2, SFAZ or FEZ are considered as LM2 for this management plan. For areas identified by an LM2 polygon on the map, please refer to the BFRMP document for the specific land management observer.

Zame	Parpete	Suppression	Zene
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack supression strategies within the zone. To minimise but fire impacts on undefended sesets.	As per RFS decument Standards for Assel Protection Zones.
Br stepic Fire Advantage Zens	To provide strategic rears as I'm production advantage which will reduce the speed and intensity of their speed and intensity of their speed and intensity of their speed and intensity of their speed and intensity of speed and speed and speed and speed and speed and speed and speed and speed speed and sp	To Improve the Madelmost on testing the United State of the United	Zon wicht related is opportunism objectives and dependent upon: - Topography - Angera - Angera - Topography - Angera - Topography - Angera - Topography - Leadien at Agera (DPV) units registation of adjacent for breaks - Mossic pattern of restination of the Agera (DPV) units registation communities reach maximum for more and the application of the Agera (DPV) units registation communities reach the Agera (DPV) units registation communities reach the Agera (DPV) units registation of the Ag
Land Management Zone	To most telerant land management objectives in area where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency. To reduce the fladhood of agreed of fires. To undertake mosaic burning.	As appropriate to schieve land management, s.g. heritage and/or fire protection s.g. tread state mosaic burning objectives.
Fire Exchanion Zone	To exclude bush fres.	N/A	Variable dependent an size of fire sensitive area requires projection.

Prattements
Specific freshments assigned (a specific in the Huntern Hill, Lane Core, Parsmella,
Ryde even are Inted in the treatments table and inhaed in the assets which they are
designed to protect, Standard BFMC wide breatment (i.e. not inhaed in a specific
asset) which occur am amongin basis within the BFMC are are:

 - entering developments in the bush fire prone land comply with Planning for Bush Fire Prolection;
 - using the Local Environment Plants (LEPs) to control development in areas with a best for all processing the processing of the processing

- varying the standard bush fire danger period as require - requiring permits during bush fire danger periods

prosecution of arsonists/ellenders
 trentigation of bush fire cause;
 normal fire suppression activities;

 normal fire suppression activities;
 asserting ormaliance with strategic fire-dighting resource management systems;
 preparation of a 552 Operations Coordination Plan;

Note on LMZ: All press not appecifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LM polypon on the map, please order to the BF RMP document for the specific land management objectives.

Zens	Purpose	Suppression	Zone
Assel Prefection Zeom	To protect human life, property and highly valued public accets and values.	To enable the safe use of Direct Attach supression strategies within the game. To minimise bush fire impacts on undefended assets.	As per RFS document Standards for Assel Protection Zones.
Brategic Flor Per Advantage Zeros	To provide strategie rereas of fee protection advantage witch will reduce which will reduce which will reduce the speed and identity of the speed and identity of reduce the pedical for spot free development. To set contamined of which is provided to the spot of the speed providencies.	To Improve the Backhood and safe use of the Backhood and safe use of Partided Adlack Improvement the Improvement Impro	Zone width related to suppression eappression eappress
Land Management Zone	To meet referent land minisperment sibjectives in area where APZs or STAZs are not appropriate,	As per the land management and fre predection objectives of the responsible land management agency. To reduce the Badheed of spread of fers. To undertake mosaic burning.	An appropriate to schieve land management, e.g., hertage and/or fire protection e.g. broad scale messic burning objectives.
Fire Exclusion Zons	To exclude bush free,	N/A	Variable dependant on size of fire sensitive area requiring protection.
